Veranst. SWS: 2

Vorlesung

Do, wöch., 17:00 - 18:30, Marienstraße 13 C - Hörsaal A, 22.10.2015 - 04.02.2016

Do, Einzel, 09:15 - 10:45, Marienstraße 13 C - Hörsaal A, Prüfung, 25.02.2016 - 25.02.2016

Bemerkung

Für Msc A alle Jahrgänge!

Einschreibung ab 19.10.2015, Belvederer Allee 5, 1. OG

Kommentar

Grün, kompakt, urban, nachhaltig oder alles zusammen? Im Zeitalter des Wandels von der Industrie- zur Dienstleistungsgesellschaft in Europa treten die Städte in einen Wettbewerb um Einwohner, Dienstleistungsstandorte und Investoren. Es ist daher ein von vielen Städten angestrebtes Ziel, wieder mehr Lebensqualität in den Innenstädten herzustellen. Dies geschieht durch umfangreichen Stadtumbau, Erweiterung der Zentren, gezielte Verbesserung des öffentlichen Raumes, des urbanen Wohnens, der Kultur-, Infrastruktur- und Freizeitangebote. Im Fokus der Vorlesung stehen europäische Großstädte, die z.B. den Paradigmenwandel von der autogerechten Stadt zum Rückbau und zur Aufwertung des öffentlichen Raumes in einen Planungs- oder Realisierungsprozess überführt haben, zum Leitmotto entwickeln, und/oder auf dem Gebiet des Innenstadtumbaus besondere Strategien entwickeln. Die Teilnahme an der Konferenz "Die Zukunft der Innenstädte" am 29./30.10. in Weimar ist Bestandteil der Vorlesungsreihe.

Kommentar

Bauhaus-Argumente ist eine Vortragsreihe des Bauhaus-Instituts für Geschichte und Theorie der Architektur und Planung. Sie lädt zu einer öffentlichen Diskussion zwischen international anerkannten Fachleuten und Theoretikern verschiedener wissenschaftlicher Disziplinen ein. Die Vorträge stellen neue Forschungsprojekte in für die Architektur relevanten Fächern vor und sollen neue Impulse für Zusammenarbeit und Austausch in der wissenschaftlichen Arbeit international, sowie innerhalb der Universität geben. In der Idee, durch Streitgespräche und Streitbarkeit, Gedanken über Zeitgeschehen, Politik und Kultur mit Positionen und Forschungen zur Geschichte des Ortes und der Institution Bauhaus zu verbinden, erhebt diese Serie den Anspruch auf Aktualität.

Kommentar

Cities have become the place for the most disastrous catastrophes. Destruction comes from a wide range of phenomena like earthquake, hurricanes, volcanoes, Tsunamis and others. It seems inevitable that these "natural hazards" are hitting cities even more in the future as the climate change develops its consequences. While engineering seeks for technical options for adaptation and mitigation, the main subject will be how people can develop new social practices in their daily life to survive, recapture and prevent damages of their lives. These questions are not easily to be answered and require a more profound understanding of urban life. This can only be achieved if these catastrophes are regarded in its societal context. This seminar wants to inform about a sociological perspective on natural catastrophes in cities. Its main assumption is that natural hazards only become a human disaster under certain circumstances. It will present recent approaches from sociology to understand more on the causes, effects and long lasting impacts of disasters in general. Looking back on different case studies, the seminar aims at providing a broader understanding of the context, framing, experience, reaction and recovery of disasters. Particular attention will be paid to the #post-disaster communities, the way people organize themselves during and after the disaster.

Kommentar

„In meinem Studium muss ich wissenschaftliche Texte lesen und schreiben können.“ Klingt einfach, ist es aber häufig nicht. Das wissenschaftliche Schreiben und der sichere Umgang mit dem entsprechenden Textmaterial ist ein zentraler Kompetenzbaustein im Studium. Dabei zeigt sich immer wieder eine Diskrepanz zwischen dem, was in Lehrveranstaltungen zum wissenschaftlichen Arbeiten vermittelt wird und den Herausforderungen, die sich stellen, wenn die Studierende erste eigene Texte nach den Vorgaben guter wissenschaftlicher Praxis verfassen sollen. Diesem Missverhältnis soll mit der experimentellen Struktur dieser Lehrveranstaltung entgegengewirkt werden.

Die Veranstaltung ist zweigeteilt. Im ersten Teil wird es darum gehen, zentrale Texte in der Disziplin Raumplanung & Raumforschung zu lesen und hinsichtlich ihres inhaltlichen und strukturellen Aufbaus zu analysieren.

Der zweite Teil der Veranstaltung wird überwiegend von den Studierenden gestaltet. Mit der Unterstützung der Lehrenden suchen sie sich die Themenbereiche des wissenschaftlichen Arbeitens aus, die sie vertiefen möchten. Diese reichen von der Findung einer zentralen Fragestellung über den stringenten Argumentationsaufbau bis hin zum korrekten Zitieren und Paraphrasieren. Im Rahmen eines Workshop-Wochenendes werden die Studierenden mit der Unterstützung der Lehrenden und externer ExpertInnen gegenseitig coachen. Am Ende des Seminares

sollen die erlernten Kenntnisse im Rahmen einer Hausarbeit zu einem raumplanerischen Thema praktisch umgesetzt werden.

1724415 Urban Sociology (Introduction)

F. Eckardt

Veranst. SWS: 2

Vorlesung

Mo, wöch., 17:00 - 18:30, Marienstraße 13 C - Hörsaal C, 19.10.2015 - 01.02.2016

Kommentar

Life in German cities has undergone substantial changes in the last decade. Not only the East German cities had to address new challenges after the reunification of the German nation in 1990, but also the West German cities had to reformulate their place in the complex urban networks. Cities are mirroring wider changes in German society where new social and political developments can be observed. Economic and cultural globalization has had a major impact on many aspects of urban life. This lecture will give an overview about major developments in German cities since the German reunification in 1990. It will provide both a sound source of information on the most important issues of German society and reflect important discussion of the international debate on urban studies. After delivering a historical overview of German cities, basic concepts of urban sociology will be developed by discussing subjects like gentrification, segregation, migration, life style diversity and others. The lecture provides an insight view into classical theories of urban sociology as deriving from Max Weber, Georg Simmel and the Chicago School.

At the beginning we will deal with the process of production of scientific knowledge as such considering basic 'rules' of scientific work. As learning by doing is usually a successful way which makes us experiencing the specific demands of a research process you will work in the course in small teams defining and planning your own research project. Starting the practical work we will first deal with different sources of information, how to decode and evaluate them as well as how to quote and organize them properly in scientific working and writing. Now having an idea how and where to gather information you will define your own research question and develop a research concept step by step going from a proper wording of the research question to the selection of fitting research methods, time planning and documentation.

In reference to the ongoing project 'Welcoming cities' the Seminar focuses on creative possibilities for establishing fertile contact and communication between residents and refugees in Thuringia. The Seminar is of transdisciplinary nature, on the intersection between visual arts and urban studies, in which to examine possibilities of intervening artistic and social-scientific research for bridging gaps in cultural and religious differences.

The aim of the Seminar is to facilitate a creative dialogue between 'hosts' (local residents) and 'guests' (Arabic refugees) in Thuringia by passing on relevant information about German and Arabic culture, presenting applicable research findings with regards to the project "Welcoming cities" and displaying works of art, to be produced in collaborative fashion and involving artists, researchers, refugees, local residents and students.

The enrollment to this course is online available at: <https://elearning.bauing.uni-weimar.de/moodle/enrol/index.php?id=244>

COURSE DESCRIPTION

Walker and Salt described Resilience in their much quoted book "Resilience thinking - Sustaining Ecosystems and People in a Changing World" in the following manner: Resilience is "the ability of a system to absorb disturbance and still retain its basic function and structure" (Walker and Salt 2006, 1). In our course, we are going to explore the concept of resilience and how it applies to Architecture and Urban Design. The overall goal of the course "Resilience – From the Housing to the Urban Scale" (UR) is for the students to learn about urban resilience, to understand its processes and elements, and to apply this understanding. "UR" is a mainly online-based course and has four main elements: workshop, video task, paper task, and evaluation. A two-day, introductory workshop (12.-13.10.15) starts off the course. Here, students will learn about resilience theory and its practical application as well as start working on their two course assignments in an environment of collaboration and exchange. While this part of the course takes place in the classroom, all further course elements are based on the e-learning platform "moodle". For the video task, which is the second course element, each student will be required to analyze as well as reflect a best- or worst-case example provided by the lecturer and present his or her findings in a short-video presentation. All videos are uploaded onto "moodle" and shared with the other students. In the third phase of the course – the paper task – students will apply their knowledge about (urban) resilience by doing field research and by writing a short paper about it. The focus of this paper shall lie on the housing unit (its inhabitants, functionality, and construction) as the basic actor of urban resilience. The course will end with a detailed feedback by the teacher as well as an evaluation of the course by the students.

J. Plaul

Veranst. SWS: 2

Seminar

Mi, wöch., 11:00 - 12:30, Belvederer Allee 5 - Seminarraum 007, 21.10.2015 - 05.02.2016

Kommentar

Changes to the urban fabric can originate from city administration and city planners, or private initiatives but also from residents or urban activists. In the latter case, often creative, low-budget interventions, projects or social networks are initiated which can have a short-term but sometimes lasting effect on the space being used. This seminar will explore not only the effects on the built environment of different forms of creative urban renewal, but will primarily focus on the social processes which lead up to and follow such interventions. Can bottom-up approaches to neighborhood improvement manage to integrate local residents? Does gentrification go hand in hand with successful creative interventions? Examples in German and international cities will be discussed.

Kommentar

Maria Skivko M.A.

Dipl.Ing. (FH) Philippe Schmidt M.Sc.

Reconstruction, Development and Citizens' Voices: Using quantitative analysis as supportive tool for urban planning including the application of SPSS Statistics for social research methods on urban change

This course is a preparatory module for students with a background in (landscape) architecture, design, urban planning, geography. Its main idea is to get a notion how to use social research methods in creating urban design and planning urban changes. The focus of seminars goes on the method of interview as a methodological tool to get data from recipients. Practically the course is oriented on doing a survey with the SPSS statistics, a software package for statistical analysis, as an approach of analyzing and interpreting data.

Within an interactive form of seminars the course gives students an opportunity to denote the specifics of social methods in urban research, to critically reflect contexts and applications of the method of interview in a survey, to discuss issues and cases where social research functions for efficiency and productivity of urban planning and urban design. Furthermore, the course is planned as a knowledge-sharing platform where students with different backgrounds and working/scientific experience exchange opinions, ideas and skills for doing social and urban research. Moreover, being a studying project, the course has a research case of Jena's Eichplatz which gives the students an opportunity to work with real data, to cooperate with several social institutions and to find practical ways of solving problems in the field of urban planning. The course is in English but it is of advantage, if you also bring some German knowledge to conduct the interviews.

1744284 'Development is the absolute Principle'-? Understanding Chinese Cities with methodological and critical Approach
W. Kam

Veranst. SWS: 2

Seminar

Di, wöch., 13:30 - 16:45, Belvederer Allee 5 - Seminarraum 005, 13.10.2015 - 02.02.2016

Kommentar

'Development is the absolute principle.' The motto, emphasised by the Chinese Communist Party's former Chairman Deng Xiaoping in a speech during his last Southern Tour in 1992, set the keystone of the country's subsequent economic development. The opening up and ambition have led to intensive modernisation, high economic growth as well as rapid globalisation. Chinese cities have been undergoing fundamental transformation since then. 'Let part of the population get rich', as another objective set by Deng, is seemingly achieved, backed by the continuous growth of GDP in the last decade.

This development is, however, accompanied by long term consequences in many aspects. Does the gained materialistic fortune compensate the drawbacks resulted by the hastening urban planning strategies? Severe pollution of air, water, agricultural land as well as disappearance of the real 'Chinese traditions', building heritage and etc. are observed. To understand Chinese cities, therefore, involves an understanding of the broad discussion, 'Who were/ are the actors contributing to the formation of the current China, how and, why?' In this seminar students will throw a glance to both the traditional and contemporary built environment in the Chinese region through an interdisciplinary approach.

The course provides an introduction to some selected Chinese cities on a thematic basis. Discussion are devoted to current planning strategies and phenomena such as heavy industrial buildings built next to residential areas; artist village and its formation in Peking; mega events in Peking and Shanghai and their impact to the cities; traditional vernacular architecture and urban settings for the Hakka tribe in the Southeast Region of China; neo-colonialism in the postcolonial Hong Kong; internal migration in between rural and urban areas-- to name but a few. Students are required to work with interdisciplinary undertakings (political history, architectural history and theory, art history, topics in urban sociology, cultural studies, postcolonial theories, governance, policies and more) by reflecting cities in different methodological approaches. Since the Chinese culture is foreign to most of the students, the seminar shall commence the investigation with Chinese cities/ settlements with the aid of different resources such as films, photography, documentaries and paintings, as well as academic journals and literature.

The course includes a sequence of lectures and student presentations. The lectures will provide the historical and theoretical background necessary for commencing the discussion of development issues in a broad perspective, while student presentations will focus on independent research including observations, literature reviews and hence, critical thinking.

Note: Participation is mandatory for AdUrb students in the first semester.

Kommentar

Meetings with representatives of different interest groups are important milestones in today's planning processes. The different expectations regarding the outcome of the meeting and the different backgrounds of the participants challenge the diplomatic skills of the planners who lead the discussion. The lecture teaches fundamental tools to guide group meetings and planning workshops towards a productive output. Practical exercise sessions address techniques to visualize and to moderate planning related issues. A consensus on multi-interest decisions in the urban context depends on the accurate detection of all different interests of the stakeholders involved and the right analysis of potentially conflicting positions. The implementation of informal planning strategies and dialogue based communication are discussed in the course.
