Theories of Urban Design: Reading Le Corbusier

Was Le Corbusier, the hero figure of modernism, the brilliant designer and self-inventor of many times, a theorist? – Yes. – No. It is hard to tell how his writing can be separated from his tremendous architectural output, if his numerous books were merely accompanying, preparing, promoting his architectural and urban works or if he developed a consistent and solid theory in its own right.

Standalone theory or not, the great architect, urbanist, designer and painter was a prolific and highly productive writer. He published at least 16 books, among them legendary long sellers like 'Vers une Architecture' (1923) or 'La Ville Radieuse' (1935). He is probably one of the most quoted and referred to architects, coining phrases like 'a house is a machine for living in' and developing iconic schemes like 'Plan voisin'. And, finally, reading Le Corbusier is fun: his manifestos his pamphlets, his pleas and rants are surely no scientific theory but they are insightful and entertaining.

In the seminar we will read selected texts of and about Le Corbusier, try to figure out what kind of writer he was and discuss if his thoughts have more than historic value.

The seminar's second subject is reading itself. You will learn about different reading techniques and how to extract meaning from text and theory. The seminar is supposed to promote a knowledge-based, critical understanding and encourage taking up a personal position to become an autonomous reader.

It is a course for everyone who truly enjoys reading, writing and discussing text. Good language skills are required. The seminar is combined with a tutorial on Le Corbusier's times and the context of his texts.

118221205 Research in Urban Design and Urban Planning

B. Schönig, S. Rudder, S. Langner

Veranst. SWS: 2

Vorlesung

Mo, wöch., 15:15 - 16:45, Steubenstraße 6, Haus F - Hörsaal K20, 29.10.2018 - 28.01.2019

Beschreibung

The lecture focuses on recent debates in urban research deriving from the perspectives of urban planning, urban design and landscape planning and architecture. Starting from these debates, it discusses methodological questions applied in different fields and contexts of urban and planning research.

Bemerkung

Barbara Schönig (Urban Planning), Steffen de Rudder (Urban Design I), Sigrun Langner (Landscape Architecture and Planning) | 2 SWS, 3 ECTS | Mo. 15:15 - 16:45 | Start: 15.10.2018 | Room: TBA

118222601 Urban Landscapes

S. Langner

Veranst. SWS: 2

Seminar

Di, wöch., 11:00 - 12:30, Belvederer Allee 5 - Seminarraum 007, 16.10.2018 - 29.01.2019

Beschreibung

The seminar is dealing with (r)urban landscapes as multi-dimensional "Raumgeschehen" of ecological, social-cultural, socio-economic relations (Seggern 2012: 194). Landscape is understood as a relational structure, by going beyond dualisms such as city – country, natural – artificial. Against this background the seminar is questioning why we have within the design and planning disciplines do develop a better understanding of diverse and complex urban-rural relationships and how landscape /urban design is searching for productive interrelations between the urban and the rural. Methods and strategies of reading, re-interpretation and re-presentation of spatial relationships within landscape architecture will be investigated and reflected (with the main focus to explorative mapping strategies). Landscape based strategies of sustainable urban design will be discussed within that context.

1724415 Urban Sociology (Introduction)

F. Eckardt

Veranst. SWS: 2

Vorlesung

Beschreibung

Life in German cities has undergone substantial changes in the last decade. Not only the East German cities had to address new challenges after the reunification of the German nation in 1990, but also the West German cities had to reformulate their place in the complex urban networks. Cities are mirroring wider changes in German society where new social and political developments can be observed. Economic and cultural globalization has had a major impact on many aspects of urban life. This lecture will give an overview about major developments in German cities since the German reunification in 1990. It will provide both a sound source of information on the most important issues of German society and reflect important discussion of the international debate on urban studies. After delivering a historical overview of German cities, basic concepts of urban sociology will be developed by discussing subjects like gentrification, segregation, migration, life style diversity and others. The lecture provides an insight view into classical theories of urban sociology as deriving from Max Weber, Georg Simmel and the Chicago School.

Richtet sich an: Europäische Urbanistik, IPP/Urban Heritage, MediaArchitecture, MA NHRE (Fak. B)

Termine: montags, 13:30 bis 15:00 Uhr, 1. Termin 15.10.2017 Ort:

Einschreibung im BISON-Portal!!!

Beschreibung

This Seminar will give an insight into different European cities and their recent development. It will be based on lectures provided 2-3 European colleagues who will be present in Weimar to share their knowledge about the cities they work on. The Seminar will be organized as a block Seminar and shall allow to compare the presented cities with others know to the students. This will help enable discuss similarities and differences in the European cities and to identify common subjects of the cities in Europe across national borders.

Beschreibung

Alongside the pure architectural and urban design solution to building a new society, modernism was accompanied by the ideas of a liberal, just society without restraints of colonialism, imperialism, rejecting old traditions and looking into the future. These goals were the same both in the war-torn former imperialist states of the Global North and the newly established post-colonial nation states of the Global South. Political and social institutions built in Europe and the USA after the First World War are strongly related to the architectural movement: a public welfare system, social housing construction, protection of the environment and a liberal system of enabling participation. But the movement didn't stop there. It spread all over the world; and was, at times rightly so, welcomed very critically.

Modernist high-rise blocks or slabs once built as social housing or as other means are reused today and taken back by the community. At times the governments try to use the renovation of these buildings for a revitalization of the whole neighborhood, in other cities activist community efforts regenerate their own buildings or informal communities are being created that look like vertical slums from the outside. Do these communities offer solutions to today's pressing affordability crisis both in the North and the South? Which role does government play, and how much self-help of a community is bearable to the safety of a neighborhood?

We will look into different regions of the world to find practices of how modernist tower blocks are reused and new communities are being built up. A multidisciplinary approach brings together scholars from different disciplines from Bauhaus University and outside Weimar.

118222906 Urban Revitalization in US: Policy and Practice**N.N.**

Veranst. SWS: 2

Beschreibung

After decades of decline, many American cities are experiencing a rebirth as vibrant, active centers where people want to live, work and recreate. At the same time, pockets of poverty remain in these cities and often spread into peripheral areas. This course surveys the urban revitalization policies and practices that federal, state and local governments and private actors have pursued in the past, and those they are pursuing today. We explore how these policies and practices are rooted in economic and political structures and cultural norms, and we consider the challenges of achieving social equity under these circumstances. These aspects of urban revitalization in the US will be compared, to some extent, with urban revitalization policies in Germany. Finally, the course will provide a quick overview of analytical and planning methods used in revitalization.

118222905 Residential Segregation in European Cities from Different Perspectives**H. Shamskooski**

Veranst. SWS: 2

Seminar

Mo, wöch., 11:00 - 12:30, Belvederer Allee 5 - Seminarraum 005, 08.10.2018 - 28.01.2019

Beschreibung

Residential segregation no longer attracts interest as an independent issue, but mainly as part of urban social change related to the post-industrial metropolis and the globalization era. This Seminar is about the great variety of patterns and trends of residential segregation in different European cities. It is also about the impact that this contextual variety has had on the dominant schemes in urban theory and about the shortcomings in making sense of segregation forms. It challenges the vision of the dual and polarized city as a fitting description of current socio-spatial divisions in large metropolitan areas in Europe and its projection as their unavoidable future under the pressure of the global trends.

We delve into a number of social and spatial urban theories at how specifically the built environment is taken into account and what influences on social segregation are ascribed to it. The aim is to shed light on broader urban dynamics and realizing the concept of residential segregation in the scale of city neighbourhoods in order to rethink radical social change and the city itself in more relevant enabling ways. The discussion would be more related to urban planning debates linked to urban sociology.

118223003 Neue alte Städte – historisierende Altstadtkonzepte seit den 1970er Jahren**E. Engelberg-Dockal**

Veranst. SWS: 2

Seminar

Di, wöch., 09:15 - 10:45, Geschwister-Scholl-Str.8A - Seminarraum 002, 16.10.2018 - 29.01.2019

Beschreibung

Anders als die Altstadt als Rechtsform sind Altstädte in unserem heutigen Verständnis ein „Produkt der Moderne“ (Gerhard Vinken). Gemeint sind Stadtzentren als (vermeintlich) historisch gewachsene, dicht bebaute Areale mit unregelmäßigen, zuweilen malerischen Straßenzügen und Plätzen, die einen Gegenpart zu den rationalen und ökonomischen Stadtanlagen seit dem 19. Jahrhundert bilden. Nach den „Traditionsinseln“ der 1930er Jahre und der Nachkriegszeit scheinen Altstädte seit der Postmoderne gefragter denn je.

Das Seminar beschäftigt sich mit Um- und Neugestaltungen von Innenstadtbereichen seit den 1970er Jahren, die auf historische städtebauliche Strukturen Bezug nehmen bzw. in historischen Typologien und/oder Formen entstehen. Betrachtet werden Beispiele verschiedener Länder mit Blick auf die jeweilige Bautradition. Hierzu zählen beispielweise das Berliner Nikolaiviertel, der „verzögerte Wiederaufbau“ der polnischen Städte Elbing und Stettin, der Dresdener Neumarkt und die Umgestaltung des niederländischen Zaanstad. Ein Exkurs widmet sich neu entstehenden Städten auf der grünen Wiese wie Poundbury in Großbritannien, Brandevoort in den Niederlanden und Jakriborg in Schweden. Gefragt wird nach den jeweiligen Konzepten und deren architektonischer Umsetzung, ebenso nach den Zielen und Strategien der Initiatoren. Im Vordergrund stehen dabei die wissenschaftliche Beschäftigung mit dem Thema und eine differenzierte wie kritische Betrachtung der gebauten Ergebnisse.

Anstelle von Hausarbeiten werden Poster (mit Kurztexten und Abbildungen) erstellt, die als Grundlage für eine Präsentation der Ergebnisse (z.B. nächste Summaery) dienen sollen. Bestandteil des Seminars ist eine Tagesexkursion mit Besuch der „Neuen Altstadt“ in Frankfurt am Main und der im DAM gezeigten Ausstellung „Die immer neue Altstadt“.

Welcome to Weimar! This lecture series will give international and German students insight into research at Bauhaus university's department "Architecture and Urbanism". Starting from Weimar the lecture series will provide an understanding of the latest developments in German scholarship concerning urban design, urban planning, and urban development as researched by the department's professors and staff. From landscape architecture, the historical Bauhaus and heritage conservation to sustainable mobility, the redevelopment of large housing estates and growing and shrinking cities – the topics of this lecture series will take you on a journey through the most important issues discussed in German cities and urban studies guided by the university's teaching staff.

The lecture series will be given in English and is open to students of all departments. Each lecture will be held by another faculty member or invited guest. Students will have the opportunity to take part in an exam to acquire credit points and a grade.

118222705 Urban/Territorial transitions to sustainability**J. Gamberini**

Veranst. SWS: 2

Seminar

Mi, wöch., 11:00 - 12:30, Belvederer Allee 5 - Seminarraum 005, 10.10.2018 - 30.01.2019

Beschreibung**Objectives**

The seminar series gives a basic understanding of transitions to sustainability through the analysis of models, theories and case studies. The seminars are designed for students who present an interest for transition processes, sustainability management and /or sustainability issues in general at the urban/ territorial level, or for those who would like to start a research project on that subject. The objective of the seminars is also to help students to formulate their own research questions and to sharpen their critical thinking on sustainability.

Contents

Over the last thirty years, transitions to sustainability have become an international emerging field of research covering different topics, such as energy production and climate protection but also agriculture, mobility, consumption, etc. in order to identify if a transition genuinely takes place. At the same time, it becomes clear that "transitions" are processes that can also be "managed": talking about tackling CO2 emissions is nothing more than trying to steer or accelerate a transition towards a low carbon society. Entering transition processes appears to be the most adapted response to deal with global risks and uncertainty, and more generally to achieve sustainability goals of intergenerational and international solidarity.

With more than 50% of the world population and 70% of the European population, cities have become a specific point of attention regarding sustainability. For several reasons, cities and regions are considered as an appropriate territorial scale to tackle and overcome the multitude of problems raised by metropolisation. What do transitions to sustainability mean for the disciplines that are directly linked with space transformation (urbanism, architecture and landscape planning)?

This seminar series proposes to explore and question more thoroughly the idea of transition as complex societal and political processes at the city or regional scale. It aims to explore the roles of cities -and per extension regions- in managing transitions on different topics related to the overall challenge of sustainability. In this module, we will raise and discuss some of the following questions:

What are transitions? Why do we talk about transitions? What values, ethics and ideas do they carry? Why are transitions so important for cities and territories and why do they have to enter such processes? What are the concrete roles of cities in these processes? What kind of changes can transition processes bring to cities? Who formulates a transition and who are the carriers of transition (politicians, administration, civil society)? What contradictions can emerge of transition processes and who are the "winners" and the "losers" of transition processes?

Methods

The seminar series is divided into two main parts. The first part gives an analytical framework about sustainability transitions. We will discuss the pertinence of concepts and existing theories about contemporary transitions but also in history.

The second part will concentrate more on specific examples that are related to the idea and the concretisation of transitions.

The seminar methods are mainly based on:

- Discussion on articles and case studies;
- Presentations from guests and the person in charge of the seminars;
- Workshops and exercises.

Because of the amount of readings (2-3 articles per week), make sure you can dedicate enough time for the preparation.

Leistungsnachweis**Examination requirement**

Certificate. The conditions to get the certificate are: course attendance, take actively part in discussions and write an essay (max. 10 pages + bibliography).
