M.Sc. Digital Engineering

Faculty Welcome for Master's Students Digital Engineering

Monday, 11th October 2021, 1 p.m., room 15, Bauhausstr. 11

Project fair

Monday, 11th October 2021, 5 p.m. via Moodle

4256402 Oberseminar Rendering, Visualisierung und Virtual Reality

B. Fröhlich

Veranst. SWS: 2

Seminar

Do, wöch., 10:30 - 12:00, Online bzw. nach Vereinbarung, ab 14.10.2021

Beschreibung

Vorträge zu aktuellen Dissertationen und Veröffentlichungen sowie laufenden Master- und Bachelorarbeiten zu den Themen Rendering, Visualisierung und Interaktion werden im Rahmen des Seminars präsentiert und diskutiert.

Bemerkung

Für diese Veranstaltung werden keine ECTS-Punkte vergeben.

Fundamentals (F)

Advanced Numerical Mathematics

Algorithms and Datastructures

Applied Mathematics and Stochastics

2301012-1 Applied mathematics (Lecture)

S. Bock, A. Legatiuk, K. Gürlebeck

Veranst. SWS: 2

Vorlesung

Di, wöch., 17:00 - 18:30, Coudraystraße 13 B - Hörsaal 3, Digital (Main), ab 12.10.2021

Beschreibung

Applied mathematics:

Fundamentals of linear algebra, eigenvalue problems, fixed point principles, solvers; Fourier series, convergence, Fourier transform, Laplace transform; Solution of initial value problems, boundary value problems and eigenvalue problems for ordinary differential equations; All topics are discussed from the mathematical point of view and their implementation in MAPLE will be studied. :

Leistungsnachweis

1 written exam

"Applied mathematics and stochastics for risk assessment" / 180 min (100%) / **WiSe** + SuSe

2301012-2 Stochastics for risk assessment (Lecture) / Mathematics for risk management (MBM)

T. Lahmer

Veranst. SWS: 2

Vorlesung

1-Gruppe Fr, wöch., 07:30 - 09:00, Tutorium for NHRE (Group 1) and DE

2-Gruppe Fr, wöch., 07:30 - 09:00, Tutorium for NHRE (Group 2)

Di, wöch., 11:00 - 13:30, Coudraystraße 13 B - Hörsaal 3, Prof. Lahmer Lecture in combination with BBB (digital), ab 12.10.2021

Beschreibung

Stochastics for risk assessment:

Introduction to probability theory with focus on situations characterized by low probabilities. Random events, discrete and continuous random variables and associated distributions. Descriptive statistics, parameter estimation. Risk Assessment by means of FORM and Monte Carlo Simulations. Introduction to reliability theory: Extreme value distributions; stochastic modeling with software tools e.g. MATLAB, Octave, Excel, R. Reliability Analysis of Systems. Catastrophic events + risk problems, Applications

Do, wöch., 13:30 - 15:00, Online (Moodle), ab 14.10.2021

Di, wöch., 09:15 - 10:45, Exercise, ab 19.10.2021

Beschreibung

Einführung in die Mechanik

1. Einführung in die Statik:
 - 1.1 Kräfte und Momente
 - 1.2 Auflagerkräfte statisch bestimmter Systeme
 - 1.3 Schnittkräfte in Fachwerken und Balken
2. Einführung in die Elastostatik
 - 2.1 Spannungszustand
 - 2.2 Verzerrungszustand

- 2.3 Berechnung von Spannungen und Verschiebungen unter axialer und Biegebeanspruchung
- 2.4 Prinzip der virtuellen Arbeit

engl. Beschreibung/ Kurzkomentar

- 1. Introduction to statics:
 - 1.1 Forces and moments
 - 1.2 Reaction forces of statically determinate systems
 - 1.3 Internal actions in pin-jointed frames and beams
- 2. Introduction to elastostatics
 - 2.1 Stresses
 - 2.2 Strains
 - 2.3 Stresses and displacements under axial and bending loading.
 - 2.4 Principle of Virtual Work

 Fr, wöch., 09:15 - 10:45, Lab class (online) Moodle Link:, ab 22.10.2021

Beschreibung

Objektorientierte Modellierung und Programmierung für Ingenieure

In diesem Modul wird fundamentales Wissen vermittelt, um objektorientierte Softwarelösungen für Ingenieuraufgaben zu konzipieren und zu implementieren. Dies beinhaltet Fähigkeiten zur Analyse von Ingenieurproblemen, um entsprechende objektorientierte Modelle zu erzeugen und geeignete Algorithmen auszuwählen. Die verwendete Programmiersprache ist Java. Da die Basiskonzepte allgemeingültig beschrieben werden, werden die Studierenden in die Lage versetzt, auch andere modernen Programmiersprachen zu einzusetzen.

Inhalte:

- Kontrollstrukturen (alternatives, loops, sequences)
- Grundlegende Datenstrukturen und Algorithmen
- Prinzipien der objektorientierten Softwareentwicklung (Datenkapselung, Vererbung, Polymorphie)
- Unified Modeling Language als Werkzeug für Softwareentwurf und -dokumentation
- Entwicklung grafischer Nutzerschnittstellen mithilfe des Model-View-Controller-Entwurfsmusters

engl. Beschreibung/ Kurzkomentar

Object-oriented Modeling and Programming in Engineering

This module covers the basic knowledge needed to develop and implement object-oriented software solutions for engineering problems. This includes the ability to analyse an engineering problem, so that corresponding object-oriented models can be created and suitable algorithms can be selected. The programming language used in this

module is Java. However, the since fundamental concepts are described in general, students will be able to program in other modern programming languages.

Content:

- Essential programming constructs (alternatives, loops, sequences)
- Fundamental data structures and algorithms
- Principles of object oriented software development (encapsulation, inheritance and polymorphism)
- The Unified Modeling Language as a tool for software design and documentation

Development of graphical user interfaces using the Model-View-Controller pattern

Veranst. SWS: 2

Vorlesung

Di, wöch., 15:15 - 16:45, Coudraystraße 13 A - Hörsaal 2, bis 30.11.2021

Mi, wöch., 09:15 - 10:45, Marienstraße 13 C - Hörsaal D, bis 01.12.2021

Beschreibung

Structural Dynamics: (50% of semester course time)

- SDOF systems:

- free vibrations, harmonic, impulse and general excitation for undamped and damped systems,
- Impulse response function, frequency response function, base excitation,
- Time step analysis: Duhamel integral, central difference and Newmark methods;

- MDOF systems: modal analysis, modal superposition, modal damping, Rayleigh damping, Frequency response functions

- Continuous systems

Do, gerade Wo, 15:15 - 16:45, Übung online (interactive) , ab 21.10.2021

Mi, wöch., 09:15 - 16:45, Vorlesung online (recorded)

Beschreibung

Die Vorlesung vermittelt vertiefte Grundlagen raumbezogener Informationssysteme, wie z.B. die Aufnahme, Organisation, Analyse und Präsentation raumbezogener Daten. Die Themen umfassen geographische Daten und frei verfügbare Ressourcen, Referenzsysteme und Kartennetzentwürfe, Geo-Datenbanken und effiziente Datenstrukturen, geometrische und topologische Datenanalyse, kartographische Generalisierung und Visualisierung sowie GIS im Planungskontext.

Leistungsnachweis

Erfolgreiche Bearbeitung der Übungen mit abschließender Klausur (4,5 credits)

Ein abschließendes Projekt wird separat bewertet und erhält zusätzliche 1,5 credits

Simulation and Validation (SaV)

Design and Interpretation of Experiments / Signal Processing

2205014 Design and interpretation of experiments: Signal Processing, Design of Experiments and System Identification

 Di, wöch., 15:15 - 16:45, Coudraystraße 13 B - Hörsaal 3, Signal Processing, Design of Experiments and System Identification

Beschreibung

Students will be familiar with following: Design and setup as well as evaluation and interpretation of experimental testing in structural engineering. Provision of techniques linking experimental and mathematical / numerical modelling. Parallel assessment of steps being part of any verification and validation procedure. Discussion of common techniques of optimal experimental designs

Bemerkung

The course gives an overview on experiments and their evaluation regarding different tasks and scopes of structural engineering. Next to different testing techniques applied for diverse aims, the equipment and measuring devices employed for testing are treated as well.

Besides the experiment itself, it is an important question, how we can use the experimental data for the calibration and validation of models in engineering. In this course, we give insights to techniques called parameter and system identification.

As often signals are not useable directly, transforms are necessary, like filtering, Fourier Transform, Wavelet Transform and, in particular for signals with noise, averaging techniques. Having models at hand, the experiment can be designed virtually by means of nonlinear optimization.

Beschreibung

Students will learn to understand machine learning as a guided search in a space of possible hypotheses. The mathematical means to formulate a particular hypothesis class determines the learning paradigm, the discriminative power of a hypothesis, and the complexity of the learning process. Aside from foundations of supervised learning also an introduction to unsupervised learning is given. The lecture introduces concepts, algorithms, and theoretical backgrounds. The accompanying lab treats both theoretical and applied tasks to deepen the understanding of the field. Team work (2-3 students) is appreciated.

4526501 Academic English Part One

G. Atkinson

Veranst. SWS: 2

Kurs

Di, wöch., 17:00 - 18:30, Online (Moodle)

Beschreibung

This is the first part of a two-part course which aims to improve your ability to express yourself clearly in written English and to develop a suitably coherent academic writing style. Part One concentrates mainly on structure in writing academic articles, essays and reports. We begin by examining the structure of individual paragraphs and move on to extended texts of various types (e.g. process essays, cause/effect, comparison/contrast, etc.). Particular attention is paid to connectives, i.e. transitional phrases and constructions which help you link ideas and paragraphs in a logical, systematic way.

This writing course will basically run as an online correspondence course using the university's Moodle platform. In addition, occasional consultations for groups of up to 10 students are offered in order to discuss written work. These will take place on pre-arranged Tuesdays at 17.00 and may take place either face-to-face

or using **Big Blue Button**.

Bemerkung

You are advised to take Part One first, although it is possible to take both parts in reverse order or concurrently (i.e. in the same semester). You may only do the latter on the authority of the course leader (Atkinson).

Voraussetzungen

Registration (compulsory)

All students must register. First time participants are required to present a B2 English Level certificate along with their email registration. All students, **including those who have already taken Academic English Part Two and those who need to repeat Academic English Part One**, must register by contacting Howard Atkinson at: howard.atkinson@uni-weimar.de.

You will be informed by email when registration opens and when the deadline is. Please do not attempt to register until you have received this Email. Registration Emails should be given the subject heading: AE I Registration.

4526502 Academic English Part Two

G. Atkinson

Veranst. SWS: 2

Kurs

Mi, wöch., 17:00 - 18:30

Beschreibung

Part Two of the Academic English course concentrates on improving and refining aspects of academic writing style. It includes sections on clause and sentence structure, punctuation rules and how to incorporate quotations, statistics and footnotes into academic texts.

This writing course will basically run as an online correspondence course using the university's Moodle platform. In addition, occasional consultations for groups of up to 10 students are offered in order to discuss written work. These will take place on pre-arranged Wednesdays at 17.00 and may take place either face-toface or using Big Blue Button.

Bemerkung

You are advised to take Part One first, although it is possible to take both parts in reverse order or concurrently (i.e. in the same semester). You may only do the latter on the authority of the course leader (Atkinson).

Robust and Leakage-Resilient Modes of Operation for Block Ciphers**S. Lucks, J. Boßert, N. Lang**

Seminar

Veranst. SWS:

2

Beschreibung

Once you have a block cipher, you need a "mode of operation" to employ the block cipher for anything "useful", such as 1

- modes for encryption, e.g., the counter mode,
- modes for authentication, e.g., variants of the CBC-MAC,
- and authenticated encryption modes, e.g., the Galois-Counter Mode (GCM) or the offset-code-book (OCB) mode.

Most of the modes have been proven secure -- and yet,

there are attacks against these modes. The proofs are always based on a certain set of assumptions, such as a "nonce" never being used a second time,

or the decryption of an invalid ciphertext never been compromised. Thus, "non-standard attacks" or "misuse scenarios", where the adversary may exploit a seemingly

innocent but actually flawed implementation of the mode, allow the adversary to bypass the proven security claims.

Moreover, typical proofs consider adversaries to learn

inputs and outputs of the mode (except for the secret key), but not any internal data. Another way to bypass proven security claims and to attack a mode is to gather

"side-channel" information about internal data, e.g., by measuring the response time in a cryptographic protocol, or by measuring the power consumption of a device running

the operation. The seminar is about

- nonstandard attacks,
- side-channel attacks,
- "robust" modes to withstand nonstandard attacks,
- and "leakage-resilient" modes for resistance to side-channel attacks.

engl. Beschreibung/ Kurzkomentar

Das Seminar beschäftigt sich mit Betriebsarten für Blockchiffren, und der Sicherheit dieser Betriebsarten gegen nicht-standard und Seitenkanal Angriffe.

Voraussetzungen

Introduction to Modern Cryptography, or equivalent

Leistungsnachweis

Mündliche Präsentation zu einem Thema, Teilnahme an Diskussion zu den präsentierten Themen, schriftliche Zusammenfassung der Kernaussagen aus der eigenen mündlichen Präsentation

Project**Extraction of main content and metadata from web crawls****B. Stein, J. Bevendorff, E. Körner**

Projekt

Veranst. SWS:

10

Beschreibung

Extraktion von Main-Content und Metadaten aus Web-Crawls

In this project, we will extract author and meta information from websites on a web-scale (Big Data). We will use approaches from natural language processing to extract and analyze content from social media sources (e.g. novelupdates) to create benchmarking datasets for authorship analytics (e.g., profiling and verification).

FL BaSe - Formal-Language Based Security WiSe21/22

S. Lucks, J. Boßert, N. Lang
Projekt

Veranst. SWS: 10

Beschreibung

Wenn binäre Daten als Byte-Strom verschickt werden, braucht man eine „Datenserialisierungssprache“ (DSL). Im Unterschied zu menschenlesbaren Sprachen gibt es viele DSLs, die Daten variabler Länge als Längenpräfix-Sprachen implementieren. Das Ziel des Projektes besteht darin, eine Erweiterung der EBNF (der „extended Backus-Naur Form“) einzuführen, und einen Prototyp für einen Parser- Generator für derartige Sprachen zu implementieren.

Discrete Mathematics
Formal Languages
Solid programming skills

Leistungsnachweis

Zwischenpräsentation, Abschlusspräsentation, Abschlussbericht

Hot Topics in Computer Vision WiSe21/22

V. Rodehorst, C. Benz, P. Debus, M. Kaisheva
Projekt

Beschreibung

Die Teilnehmer werden an ein aktuelles forschungs- oder industrierelevantes Thema herangeführt. Es ist nicht beabsichtigt einen festgelegten Bereich in voller Breite zu explorieren. Stattdessen werden die Teilnehmer mit der vollen Komplexität eines begrenzten Themas konfrontiert und die Eigeninitiative gefördert. Es ermöglicht einen Einblick in die Forschungs- und Entwicklungsprojekte des Fachgebiets.

Bemerkung

Ort und Zeit werden zur Projektbörse bekanntgegeben.

Voraussetzungen

Gute Programmierkenntnisse (z.B. C/C++, MATLAB, OpenCL)

Leistungsnachweis

Aktive Mitarbeit, Einführungsvortrag, Abschlusspräsentation, Dokumentation

In Dialog with the Virtual Museum

B. Stein, M. Gohsen, J. Kiesel
Projekt

Veranst. SWS: 10

Beschreibung

Though current "smart" assistants like Alexa, Siri, or Google Assistant are very limited in their capabilities, they foreshadow a time in which we can talk to "the Web" like we do to a human. One of the current challenges for such assistants is, after they identified the relevant bits of information, to formulate answers as a human would. This project will focus on tackling this challenge for a specific situation, namely while visiting a virtual museum. In this project, which is part of a larger collaboration to make this museum "reality," the participants will research on and learn to apply methods of information representation, natural language generation, and voice interaction.

NoRa - No Ransom

S. Lucks, J. Boßert, N. Lang
Projekt

Veranst. SWS: 10

Beschreibung

In a previous project, students developed a prototype of a fileserver that hinders various kinds of ransomware attacks.

This semester, we would like to extend the prototype to a version that can be used in practice.

This includes programming in C++ and Python, as well as finding solutions to edgecases that have not been dealt with yet.

Traffic Data and Simulation

U. Plank-Wiedenbeck, M. Fedior, F. Post, O. Singler, J. Uhlmann
Projekt

Veranst. SWS: 4

Mi, wöch., 11:00 - 12:30, Marienstraße 7 B - Student Design Studio – SDS 303, 20.10.2021 - 02.02.2022

Beschreibung

The project consists of a seminar during the semester. The project provides practical information on traffic data acquisition, preparation, and processing and microscopic traffic simulation. Students work on a project including a term paper during the semester, which concludes with a presentation.

The participants work on a practical problem within the research project "Bauhaus.Mobility Lab".

Using trajectories to calibrate microscopic traffic simulations is a promising field of research. In groups, the students receive and generate vehicle trajectory data. The own data will be generated via UAVs and traffic surveys at an intersection in Erfurt. The participants examine and process the trajectories using Machine Learning. Furthermore, they set up microscopic traffic models and investigate different calibration parameters for realistic driving behaviour simulation.

Bemerkung

Interested persons please contact Mr. Marco Fedior (marco.fedior@uni-weimar.de)

Voraussetzungen

The project requires prior knowledge in microscopic traffic simulation with PTV VISSIM and working with large data sets in Python. Additional knowledge in Machine Learning and object tracking with Computer Vision are welcome.
