Summary

China is now on the fast track to urbanization and modernization. However, problems due to insufficient infrastructures become extreme, especially at traffic sector. To develop urban rail transit is considered to be the right way to solve such traffic problems. Because of intensive investment, Chinese government is not able to afford the massive URT development. As an access to promote URT development in China, PPP application will be analyzed in this paper.

At URT sector, it will analyze the preconditions for PPP application, PPP procurement process, supporting policies for accompanied development, URT operation, fare policy, regulation system, possible PPP contract models and their risk allocations. In addition, two famous URT projects will be researched as case studies.
