Design Project iAAD - Schoolhouse in Burgenland

N. Geißendörfer, L. Mücke, K. Schmitz

Veranst. SWS: 8

Projektmodul

Do, wöch., 09:15 - 16:45, Belvederer Allee 1b - Stud. Arbeitsraum 202, 04.04.2013 - 30.06.2013

Bemerkung

You can find further information on the iAAD-program at
http://www.uni-weimar.de/architektur/e+gel2/html_e/3_iaad/i_ind.htm

Please apply with a letter of motivation and portfolio including your best two projects.
Closing date for applications: 1st of March 2013

Kommentar

It is an undisputed fact that in the course of the twentieth century society and school changed in fundamental ways. At the century's beginning the school was essentially concerned with the transmission of basic cultural techniques (reading, writing, arithmetic) and the inculcation of discipline and obedience. Today, pupils are supposed to be - and want to be - enabled to relate appropriately to the challenges of the present and the future. Along with their pedagogical goals, the framework conditions and the methods of teaching and learning have also changed fundamentally. This has repercussions for the space that school require.

Adrian Scheidegger: How Much Space Do Schools Need? In: School Buildings. The State of Affairs. 2004

By designing a schoolhouse in the Austrian Burgenland the spacial requirements of today's school should be analysed. Burgenland has been selected as a field for the design research. On account of its geographical proximity to Vienna, Bratislava, Győr and Graz it offers great potential in terms of expanding existing village structures and further developing traditional typologies.
