Beschreibung

Life in German cities has undergone substantial changes in the last decade. Not only the East German cities had to address new challenges after the reunification of the German nation in 1990, but also the West German cities had to reformulate their place in the complex urban networks. Cities are mirroring wider changes in German society where new social and political developments can be observed. Economic and cultural globalization has had a major impact on many aspects of urban life. This lecture will give an overview about major developments in German cities since the German reunification in 1990. It will provide both a sound source of information on the most important issues of German society and reflect important discussion of the international debate on urban studies. After delivering a historical overview of German cities, basic concepts of urban sociology will developed by discussing subjects like gentrification, segregation, migration, life style diversity and others. The lecture provides an insight view into classical theories of urban sociology as deriving from Max Weber, Georg Simmel and the Chicago School.

2911001 Real estate asset management**A. Kämpf-Dern, B. Bode**

Veranst. SWS: 4

Integrierte Vorlesung

Di, wöch., 07:30 - 10:45, Marienstraße 7 B - Seminarraum 103

Beschreibung**Real Estate Asset Management**

Lecturers: Prof. Dr. Annette Kämpf-Dern (Vertretungsprofessorin), Professur Immobilienwirtschaft und –management; Oliver Vitzthum, Geschäftsführer Vitzthum Projektmanagement GmbH

Scientific Assistant: Kassandra Löffler M.Sc.

Language: English

Learning Outcomes:

The students

- acquire a solid understanding of the goals, structures, tools/methods and processes/workflows of modern sustainable real estate management
- are able to develop workflows and use tools/methods for strategic decision making in regards to the one-property-level as well as the portfolio level
- experience the practical value of theory and models in applying them on problems of every day real estate management work
- gain knowledge about the different situations and requirements of major real estate asset classes (residential and commercial: office, logistics, hotel, and/or retail)
- are able to apply knowledge and skills to formulate concepts and strategies to prepare decisions and realize value generating potential of typical asset management problems in the life-cycle of residential and commercial assets
- are competent to develop alternative options as well as scenarios and to compare them based on explicit criteria deducted from assumed or given stakeholder goals
- practice individual as well as interdisciplinary team work case studies
- learn to write and present well founded decision memos on property or portfolio strategies or regarding single measures like lease contracts or tenant improvement measures

Module Outline:

- 10.10.2017: Introduction (3 h)
- 07.11.2017, 7.30-8.30: Opening exam/Testat (60 min), based on defined pre-readings (instead of final exam)
- Interactive lectures in which
 - case studies from different life cycle phases of residential and commercial real estate asset management (strategy, marketing, letting, maintenance, redevelopment, transaction) are introduced. Topics are #
 - 07.11.17: REAM transaction of residential buildings; #
 - 21.11.17: REAM strategy and asset redevelopment; #
 - 05.12.17: Building components and interdependency, energy-oriented refurbishments; #

- 19.12.17: Asset maintenance and life cycle costs / considerations; #
- 09.01.18: REAM-marketing and leasing contracts and parameters; #
- 23.01.18: REAM organizational structure and in- and outsourcing options for REAM and asset services;
- students brainstorm, propose and discuss possible strategies/solutions, based on previous studies, personal background and concepts/models/tools/ from preparatory literature;
- external experts provide input on selected, case-relevant issues (21.11./5.12./9.1.);
- students' written decision memos are discussed and commented.
- 30.1.18: Course wrap-up (1,5 h)

Bemerkung

Examination:

- Opening exam: 25% (individual work)
- Submission of 4 (out of 5) case memos: 75% (student tandem work)

907004 Fundamentals of structural health monitoring (SHM) and intelligent structural systems

K. Smarsly, E. Tauscher, M. Theiler, M. Steiner, J. Wagner

Integrierte Vorlesung

Mi, wöch., 09:15 - 12:30, Coudraystraße 13 D - Pool-Raum 010

Beschreibung

Structural health monitoring (SHM) and smart structural systems, also referred to as "smart structures" or "intelligent infrastructure", are primary subjects of this course: Basic principles of modern SHM are taught; also, concepts of smart structural systems, which are capable of self-assessing their structural condition with a certain degree of intelligence, are elucidated in more detail. Measuring techniques, data acquisition systems, data management and processing as well as data analysis algorithms will be discussed. Furthermore, approaches towards autonomous and embedded computing, to be used for continuous (remote) monitoring of civil infrastructure, are presented. Throughout the course, a number of illustrative examples is shown, demonstrating how state-of-the-art SHM systems and smart structural systems are implemented. In small groups, the students design structural health monitoring systems that are validated in the field. The outcome of every group is to be documented in a paper, which is graded, together with an oral examination, at the end of the course. Prerequisites for this course: Object-oriented modeling and Java programming language. Requirements for examination: (i) Development of a wireless SHM system, (ii) participation in the project work (including the laboratory test), (iii) written paper. No previous experience in the above fields is required by the students; limited enrollment.

Bemerkung

Please note: Time and location will be announced. Enrollment must be done online.

Information on how to enroll will be provided in the first lecture on October 11, 2017 (9:15am), Coudraystr. 13D, Orion-Pool.

Voraussetzungen

Object-oriented modeling and Java programming language.

Basic knowledge in structural dynamics would be an advantage.
