Title MODEL PROJECT

Module number M 2.1

Semester	Frequency	Interval and duration	ECTS credit points	Workload	Language(s)	Module coordinator(s)
Second and Fourth Semester	annual	weekly 2 semesters	21 CP	630 hours	English	Dipl.-Ing. Philippe Schmidt

Type and Usability of module	Formal requirements for participation	Examination requirements
Seminar and Practical Project (internship)	-	Completion of course requirements (presentation, report, practical project/training)

Target qualifications

Develop in-depth understanding and exchange about professional fields dedicated to create more resilient cities in an international context. Self-positioning and self-understanding of participants professional role in the context of creating more resilient cities through adequate professional project-based training in the sense of 'Reflective Practice'.

Content

The Model Project preparatory Course (M 2.1.1) introduces course participants to current trends in urban development and interdisciplinary approaches that target on better planning practice in applied research, practice and administration (3 LP)

Model Project module (18 LP) including

1) M 2.1.2 the Practical course (15 LP) of the module takes place world-wide at a selected "Model Project Partner" (offices, institutions, administration), which is either an internship arrangement (minimum 3 months) proposed through the programme or taking part the employer of the participant, related to urban design, planning, research and development. The training place must be approved through the head of the module.

2) M 2.1.3 Forum seminar & coaching (3 LP)

This part of the seminar is to reflect existing urban practice in a presentation that reveals to the "Model Project" students are participating in during their third semester. Finally, as a highlight of the academic training the presentation is held on the public academic event of our Model Project Forum.

Teaching and learning forms / Didactic concept

In the first part of the Model Project preparatory Course students learn to how to link their existing professional experience to a broader field of professional activities related to planning and design. They present and reflect their professional experience. In a second part, the students are coached to further develop their specific interests and communicate them in their professional portfolio. The practical training is accompanied through a well-tested seminar in a virtual class-room, including a guided course with specific due dates, individual and groupwise online-consultations, life-meetings of the entire group as well as video-based presentation-coaching through Adobe Connect. Course requirements include a final presentation, an interim report and a final report (25-30 p.) which are handed in online. The module closes with the "Model Project Forum", requiring the students attendance in Weimar or any selected place. The forum fosters a critical but practice -related discussion among students and model project partners who are attending as guest critiques.

Additional information or course-specific requirements

Scholarships in the European Mobility Framework can be supported depending from the individual placement country during the model project practical course.

Lectures / courses included in the module	SWS / ECTS credit points
-	14 SWS
