

We're building something real

And looking for reinforcement

With initial practical self-initiative & product interest

We are developing a Citizen App for structured digital submissions and an administration portal for municipalities, with the goal of making application processes more understandable, faster, and more measurable.

Not an academic project

But a real venture with a product-oriented MVP focus, a municipal perspective, and a clear path toward piloting.

Note on Compensation

Participation is unpaid prior to formal incorporation, with concrete potential for co-founding or employee equity.

Where We Currently Stand

- ✓ CTO found → technical direction is set
- ✓ Product concept, business plan & MVP logic are in place
- ✓ System architecture established
- ✓ First municipal interest → actively building contacts

● Prototypes are currently being set up ← in progress

What's Coming Next

- Develop prototypes into demo-ready products
- Recruit additional contributors from development, UX & adjacent areas
- Sharpen pilot processes & incorporate feedback from public administration
- Build the foundation for pilot talks, incorporation & sustainable impact

What You Get

- | | |
|--|--|
| ● Real Influence
Shape it from day one — not just supporting work. | ● Real Product
MVP in a municipal context, real user problems. |
| ● Flexible Model
Working student, project-based, or part-time. | ● Growing Team
CTO on board, architecture in place, solid environment. |
| ● Regular Feedback
Regular check-in & personal exchange with the team. | ● Practical Experience
Real development work in a GovTech startup. |

Who This Is Particularly Interesting For

We are not looking for rigid roles, but people from various disciplines who can bring self-initiative to an early, ambitious venture. Ideally, you bring some initial practical experience, for example from working student positions, internships, personal projects, or similar.

Relevant Degree Programs & Focus Areas

Computer Science

Software Engineering

Business Informatics

Media Informatics

UX / UI Design

Interaction Design

HCI / Human Factors

Public Administration
Informatics

Public Management

Data Science

DevOps / Cloud

Cybersecurity / QA

Where You Can Contribute

Software Development

Frontend, Backend, Fullstack, web & app development, API integration, testing.

UX / UI & Accessibility

User guidance, interface design, accessible design, prototyping.

Produkt, Research & Service Design

Translate user needs, structure processes, derive requirements.

DevOps, Cloud, QA & Security

Build & test pipelines, deployment, quality assurance & secure foundations.

Data, OCR & Assistant Functions

Document analysis, helper functions, simple automation & AI components.

Public Sector Affinity

For everyone who combines public administration or public management with technology.

What's Helpful

- Interest in real product questions
- Drive to take on real responsibility
- Some practical experience (of any kind)
- Openness to an early-stage startup environment

Why a Conversation Is Worth It

You are joining a project that already has substance: municipal interest, established system architecture, CTO on board, and concrete next steps we tackle together. No endless planning rounds — we build.
