Re-Creation:

SMOKE FANTASIA

HsinYu Chuang

For the final project, I'd like to combine generative visualizations and also with generative music by collecting data from smoke sensor.

Hence, smoking is not only the moment for relax but also could let people create something during the time(collective creation) and then trigger more interesting conversations and interactions among the people.

The smokers will be kind of atmosphere producers in the bar or in the party. They are not only smoking but also playing the music, like DJs.

Visualization

Sound

→ Mapping/ Representation of smoking
