

Bio idea: Bean-sprouts Lantern

Referrence: *Growth Pattern*, Allison Kudla, 2010

<https://vimeo.com/79462371>

# How it did?

- **Tools and patterns.**

- **Cut them up with moldule and tool.**

- **Put the cutted leaves into a pattern box.**

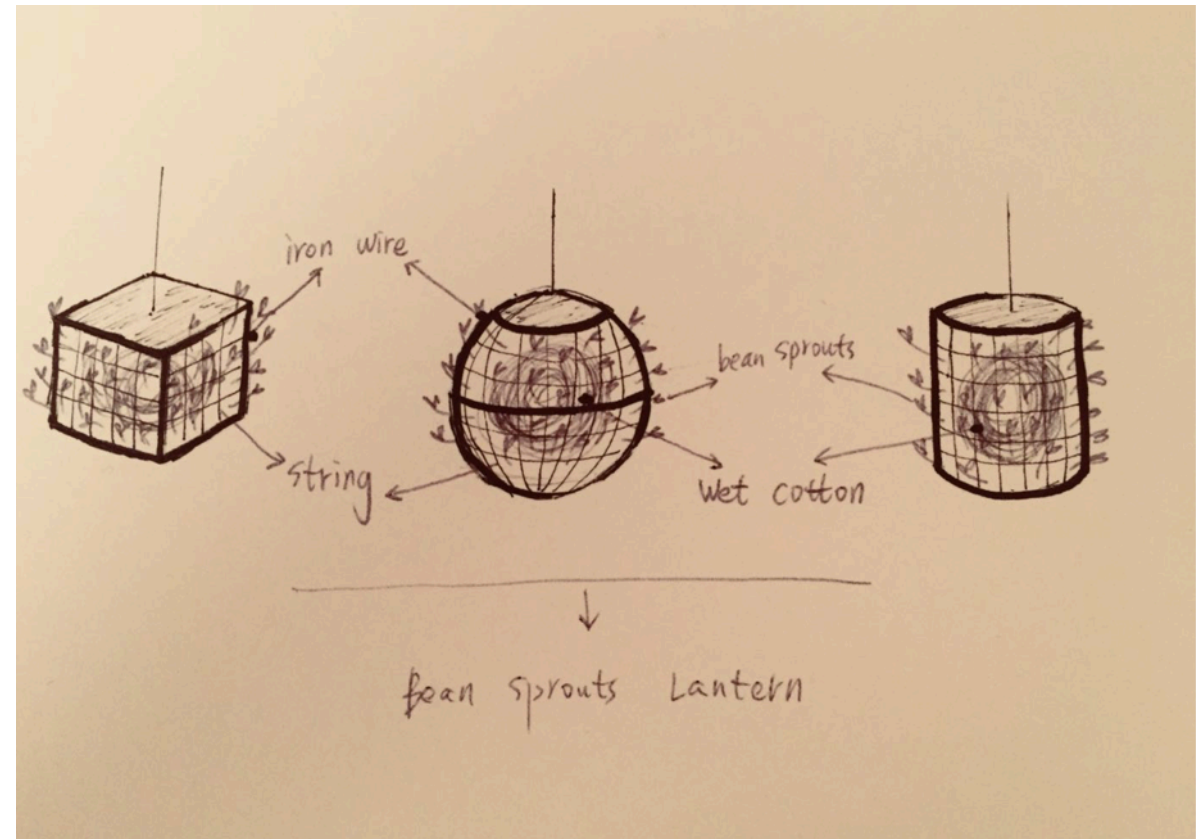

- **There are new leaves Growing up ,so the whole parttern is growing up.**

## What am I going to do?

- Let Bean-sprouts grow in a different shape structure, ball, cube, cylinder and so on .let them grow as they like and I will record the changes by pictures and videos. they look like a lantern, so I called them *Sprouts Lantern*.

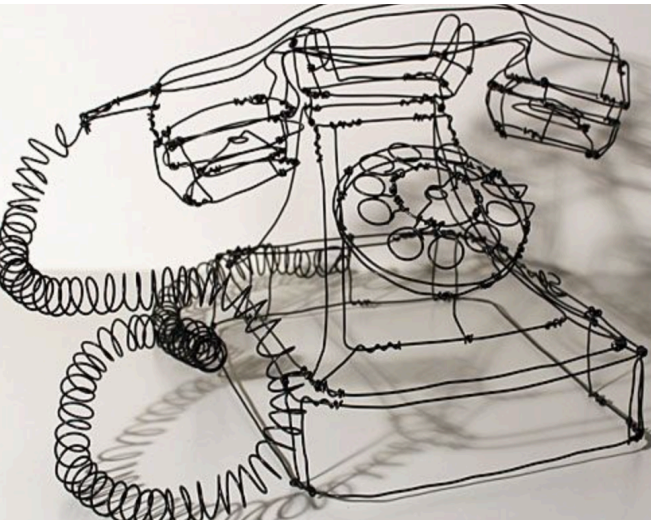

# Material

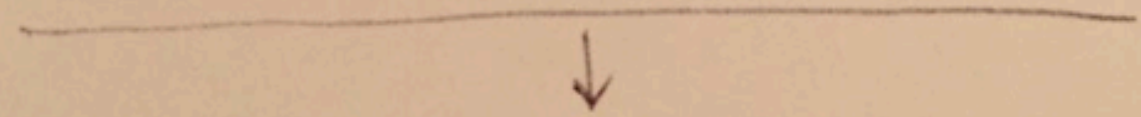

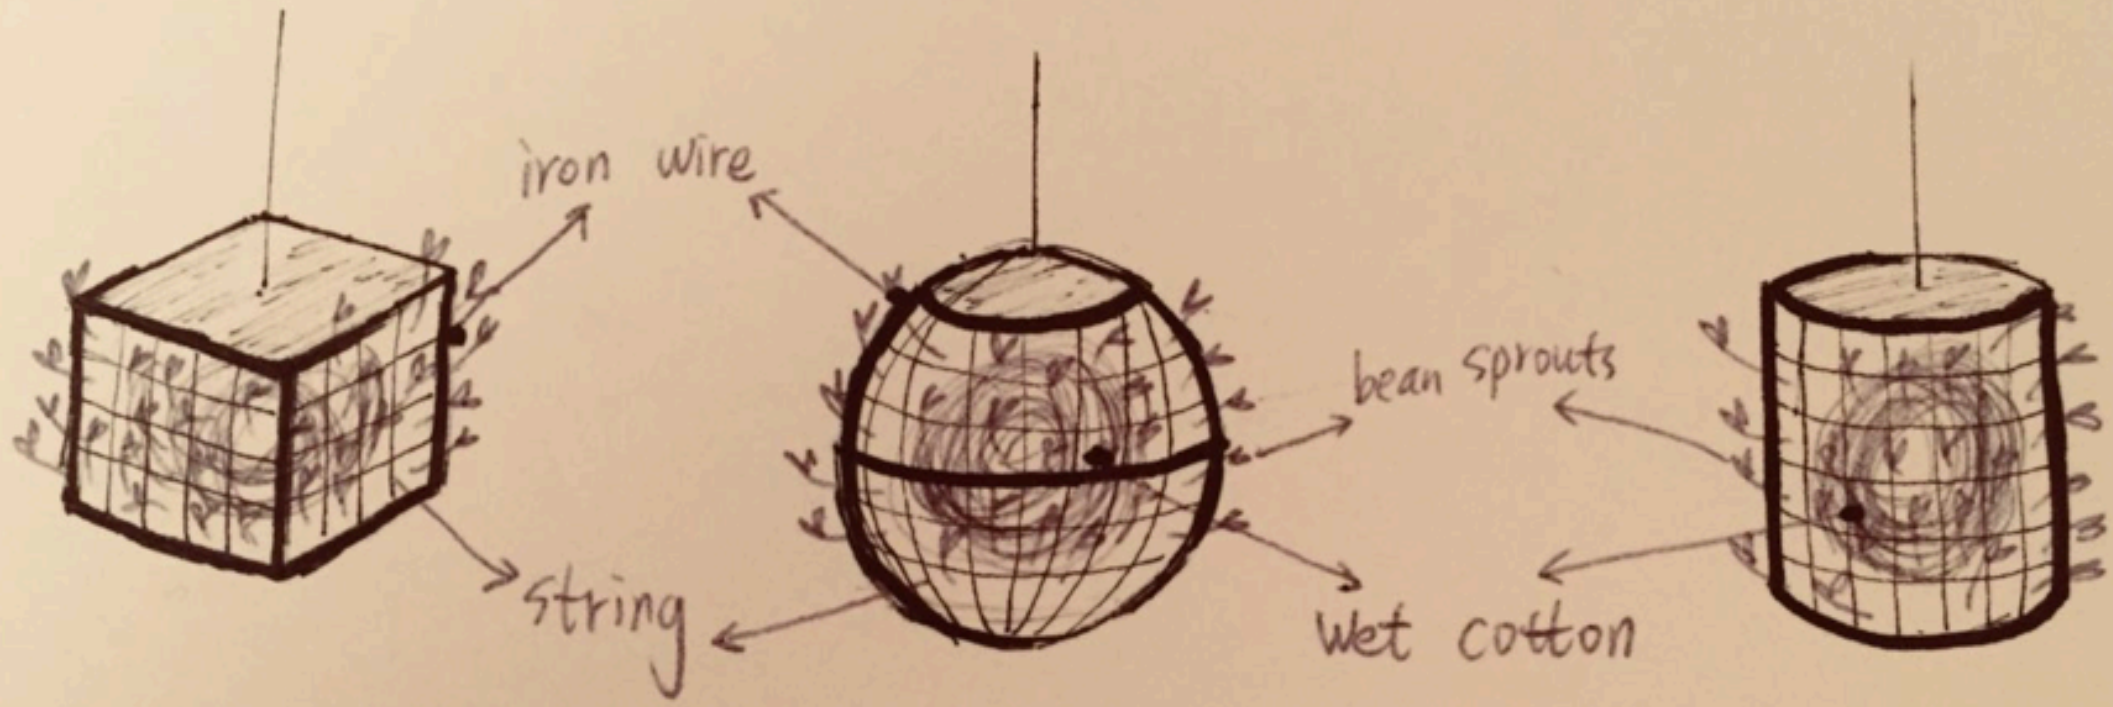

---

---

B e a n / i r o n   w i r e / s t r i n g / w e t   c o t t o n

- Use the iron wires to make shape structure.(maybe with some fluorescence)
- Use the strings to round the shape and become some small “window” to support the sprouts grow.
- Use the wet cotton to nurture the sprouts

bean sprouts lantern
