

HOW TO BUILD A HOUSE

Sketch

Materials

- Plywood
- Wooden bars
- Wood glue

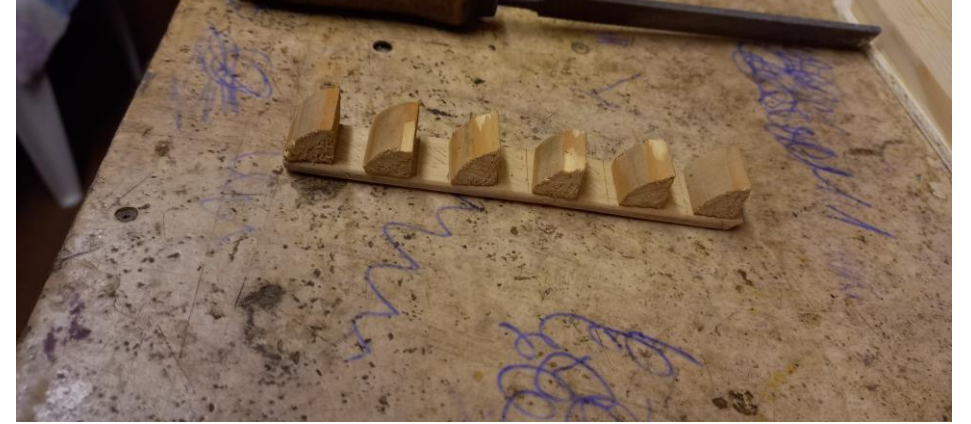

The idea is to build a little house made out of just a few resources

Process of the work

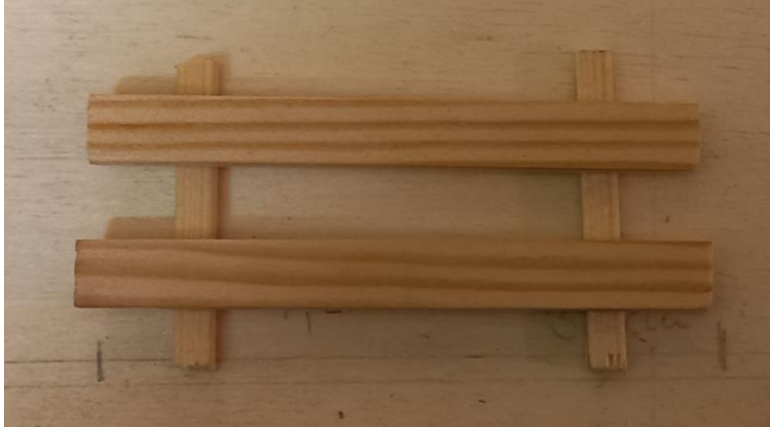

First steps of
the front side
and staircase

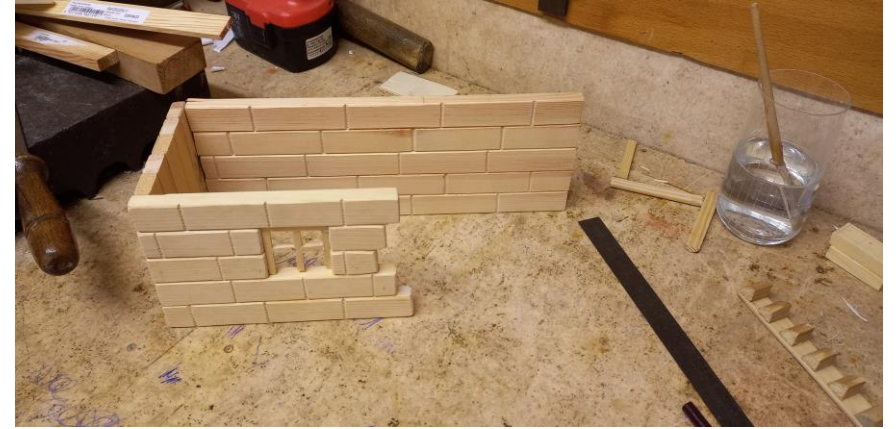

Backside and
window

Process of the work

Left side of the house and fence

Roof part front side and final results

Story behind the project

My grandpa was a great craftsman and built many things by himself.

One of his biggest projects was a garden house.

I was always in awe when I looked at his work.

Story behind the project

He also built little things with so much passion, like the little crib for christmas. In order to honor him I started my project. It should be a tribute to his work and I wanted to share his passion for work.

Result of the project

I've made a little tutorial „how to build a house“, so that people can see my process and the struggles I had.
