**Content structure of the app:**

**Opinion:**

This app helps to discover world heritage sites in Germany. It offers routes with detailed informations and recommends cities to visit. It has relevant info about places like website address on the map and phone number. Also sharing function on social media or email and SMS. People can share photos via Instagram with #welterbegermany hashtag and application fetches and shows in pictures part. In the map screen it shows all the places in Germany. It is easy to get info about places when touching the markers. That app is functional and easy to use. Screen transitions are smooth but gestures are not enough only swipe left and right to change place information. I would use photo sharing feature in my prototype App for Weimarpedia. It is easy and helps people to discover interesting photos about the world heritage sites with using Instagram photos which are tagged with #welterbegermany hashtag. App puts these photos to its gallery.
