Describe the content structure of the app:

- Map (Map GPS + Map Static + Tourist Route)
- Introduction (With Articles)
- Photos (With Photos & Paintings)
- Share (To E-Mail, Facebook & Twitter)
- Service (With Information and Tips)
- Contact (With Telephone, Fax, E-Mail & Website)

Opinion: Which features would you use in your prototype App for Weimarpedia, and why?

I would like to use:

- Map: I think it's the main reason why people want to download the App. Map is a very important function for guiding ways. With a map with more details, the user experience may be better.
- Photos: With photos it maybe easier and faster for users to know about the scenery spots before they go there

- Particip.: It makes the App more interactive and functional. With it users may not feel they are using it alone. With the participations of review, rating and upload, users may get more familiar with the scenery spots. And it will also enhance the social connection among users.
- Share: It's important for young users in their social circle. Through sharing to others online, more people will become new users of the App.
- Audio: It can make the App become an audio guide for users during their touring. Users don't need to keep their eyes on the App but can also get information from it simultaneously.
- Nearby: It's more convenient and considerable for users to travel around and saving time for them to check where to go next.
- Service: Information and tips are quite useful so that users do not need to search online or ask people specially. That will also be useful if add some rating function in this part so that users who have been there recently and got newer information or tips may post them online and let others know. For example, some places are usually open on weekend, but maybe it's closed for this weekend due to some events.
