For this task I choose to work with a signal which includes different icons. I choose to analyze this one because it is used to indicate how to act in an extreme situation. I think that the message is not really clear and in case of an emergency, it can generate many problems.

**Coquimbo, Chile
Tsunami**

In case of Tsunami.... fly???

But it´s not the only case

They are even worst examples

**Follow the arrow to the Tsunami
- Cool man, lets do that!**

**Go to the evacuation zone,
or to the Tsunami... whatever...**

And some that can be a little bit more understandable

Proposal

a. To identify an area

**Following international conventions.
Color and layout to indicate a risk area.**

Proposal

a. To identify evacuation way.

**Using green color and EVACUATION instead
of tsunami. The direction is given by the
character but it can also include an arrow too.**
