

THE OBSERVER

Theme Future Societies
Location Bauhaus-Universität Exhibition Studio
Status Installation, February 2026.

Concept - A living room where intimacy becomes surveillance capitalism.
- Visitors realize they are being observed, analyzed, and translated into data in real time.
- The familiar turns into a system of control.

Spatial 1. Entry

Narrative Visitors enter what appears to be an ordinary living room. The space feels domestic and unthreatening. They sit, interact, and inhabit the setting casually.

2. Detection

A concealed camera captures their presence. Movements are detected in real time and processed through the AI system.

3. Translation

A narrated voice describes gestures and behavior, converting subtle actions into observable data.

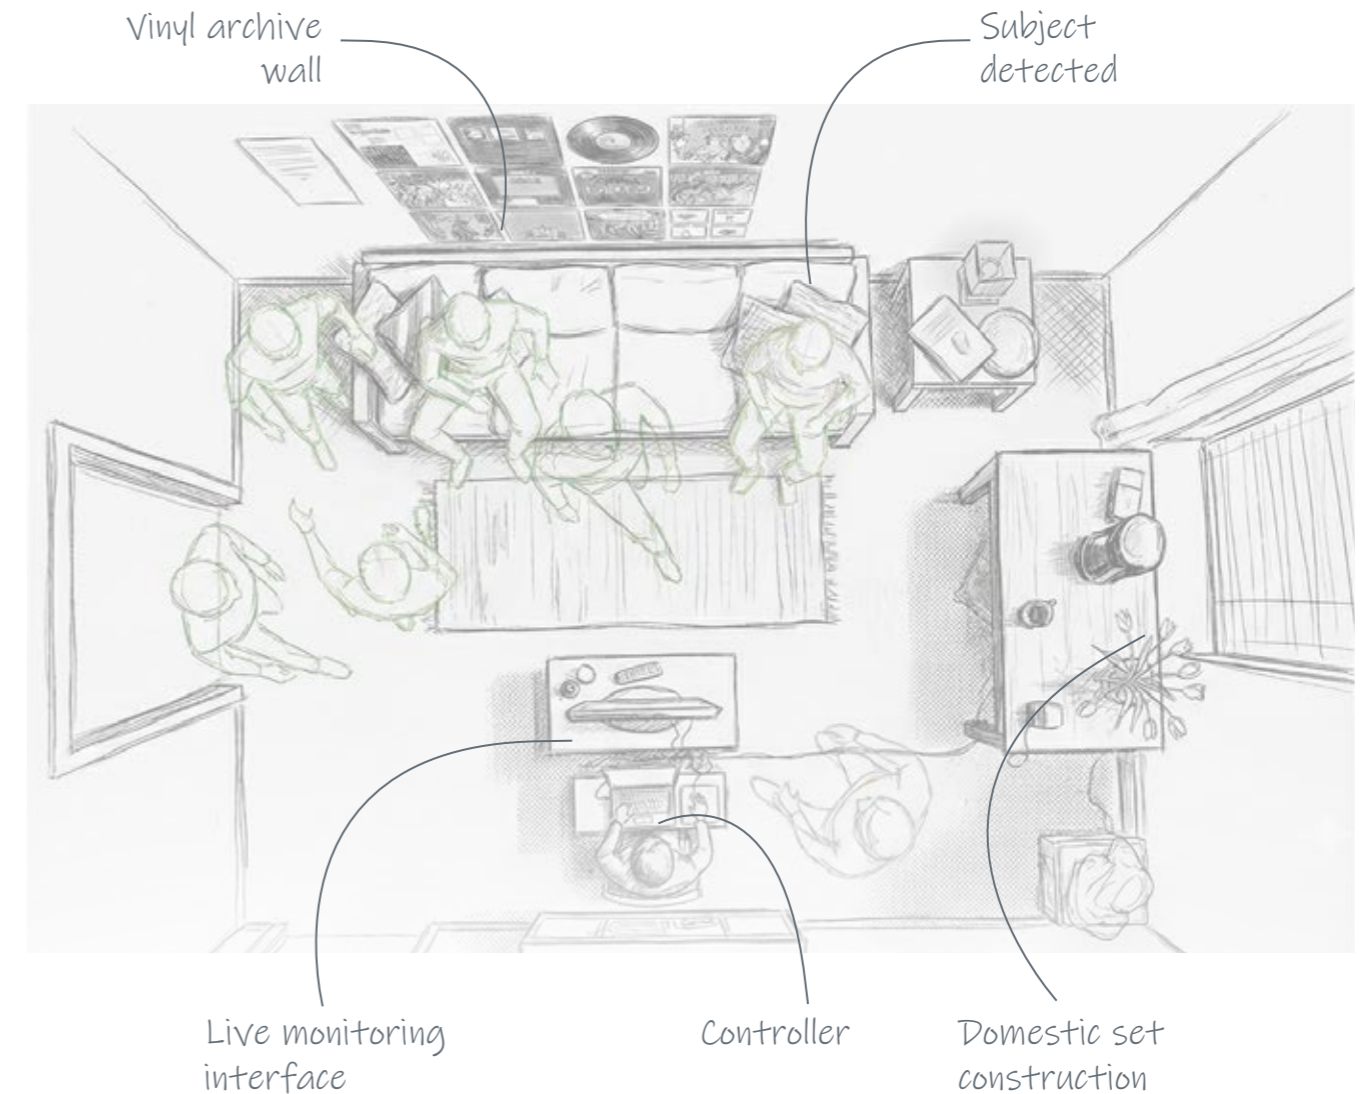

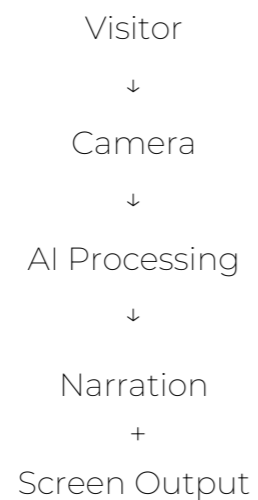

Simultaneously, live surveillance footage appears on screen.

A shift occurs - from comfort to awareness.

The visitor becomes both inhabitant and subject.

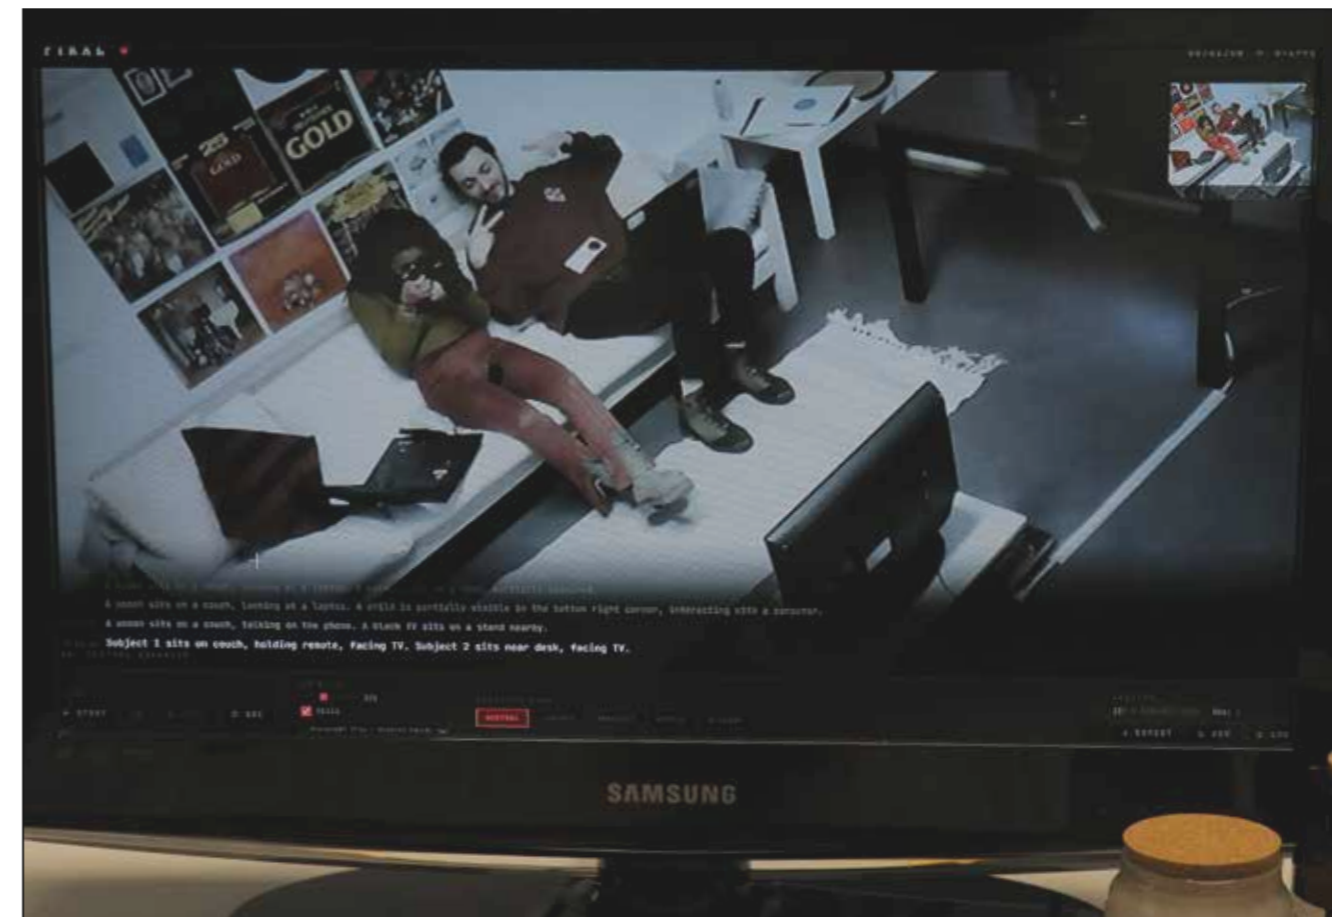

- Setup**
- Domestic living room (sofa, rug, records)
 - Hidden surveillance system
 - Real-time feedback (screen + voice narration)

- Role**
- Concept co-development
 - Spatial scenography
 - Set transformation (classroom → living room)
 - Sourcing & styling
 - Installation execution

Lived-in

Surveillance footage.

Users observing being observed.

Check surveillance footage

Screen-recorded videos.

Live AI detection + narration output.

FALSE ASCENT

THE FABRIC SCULPTURE

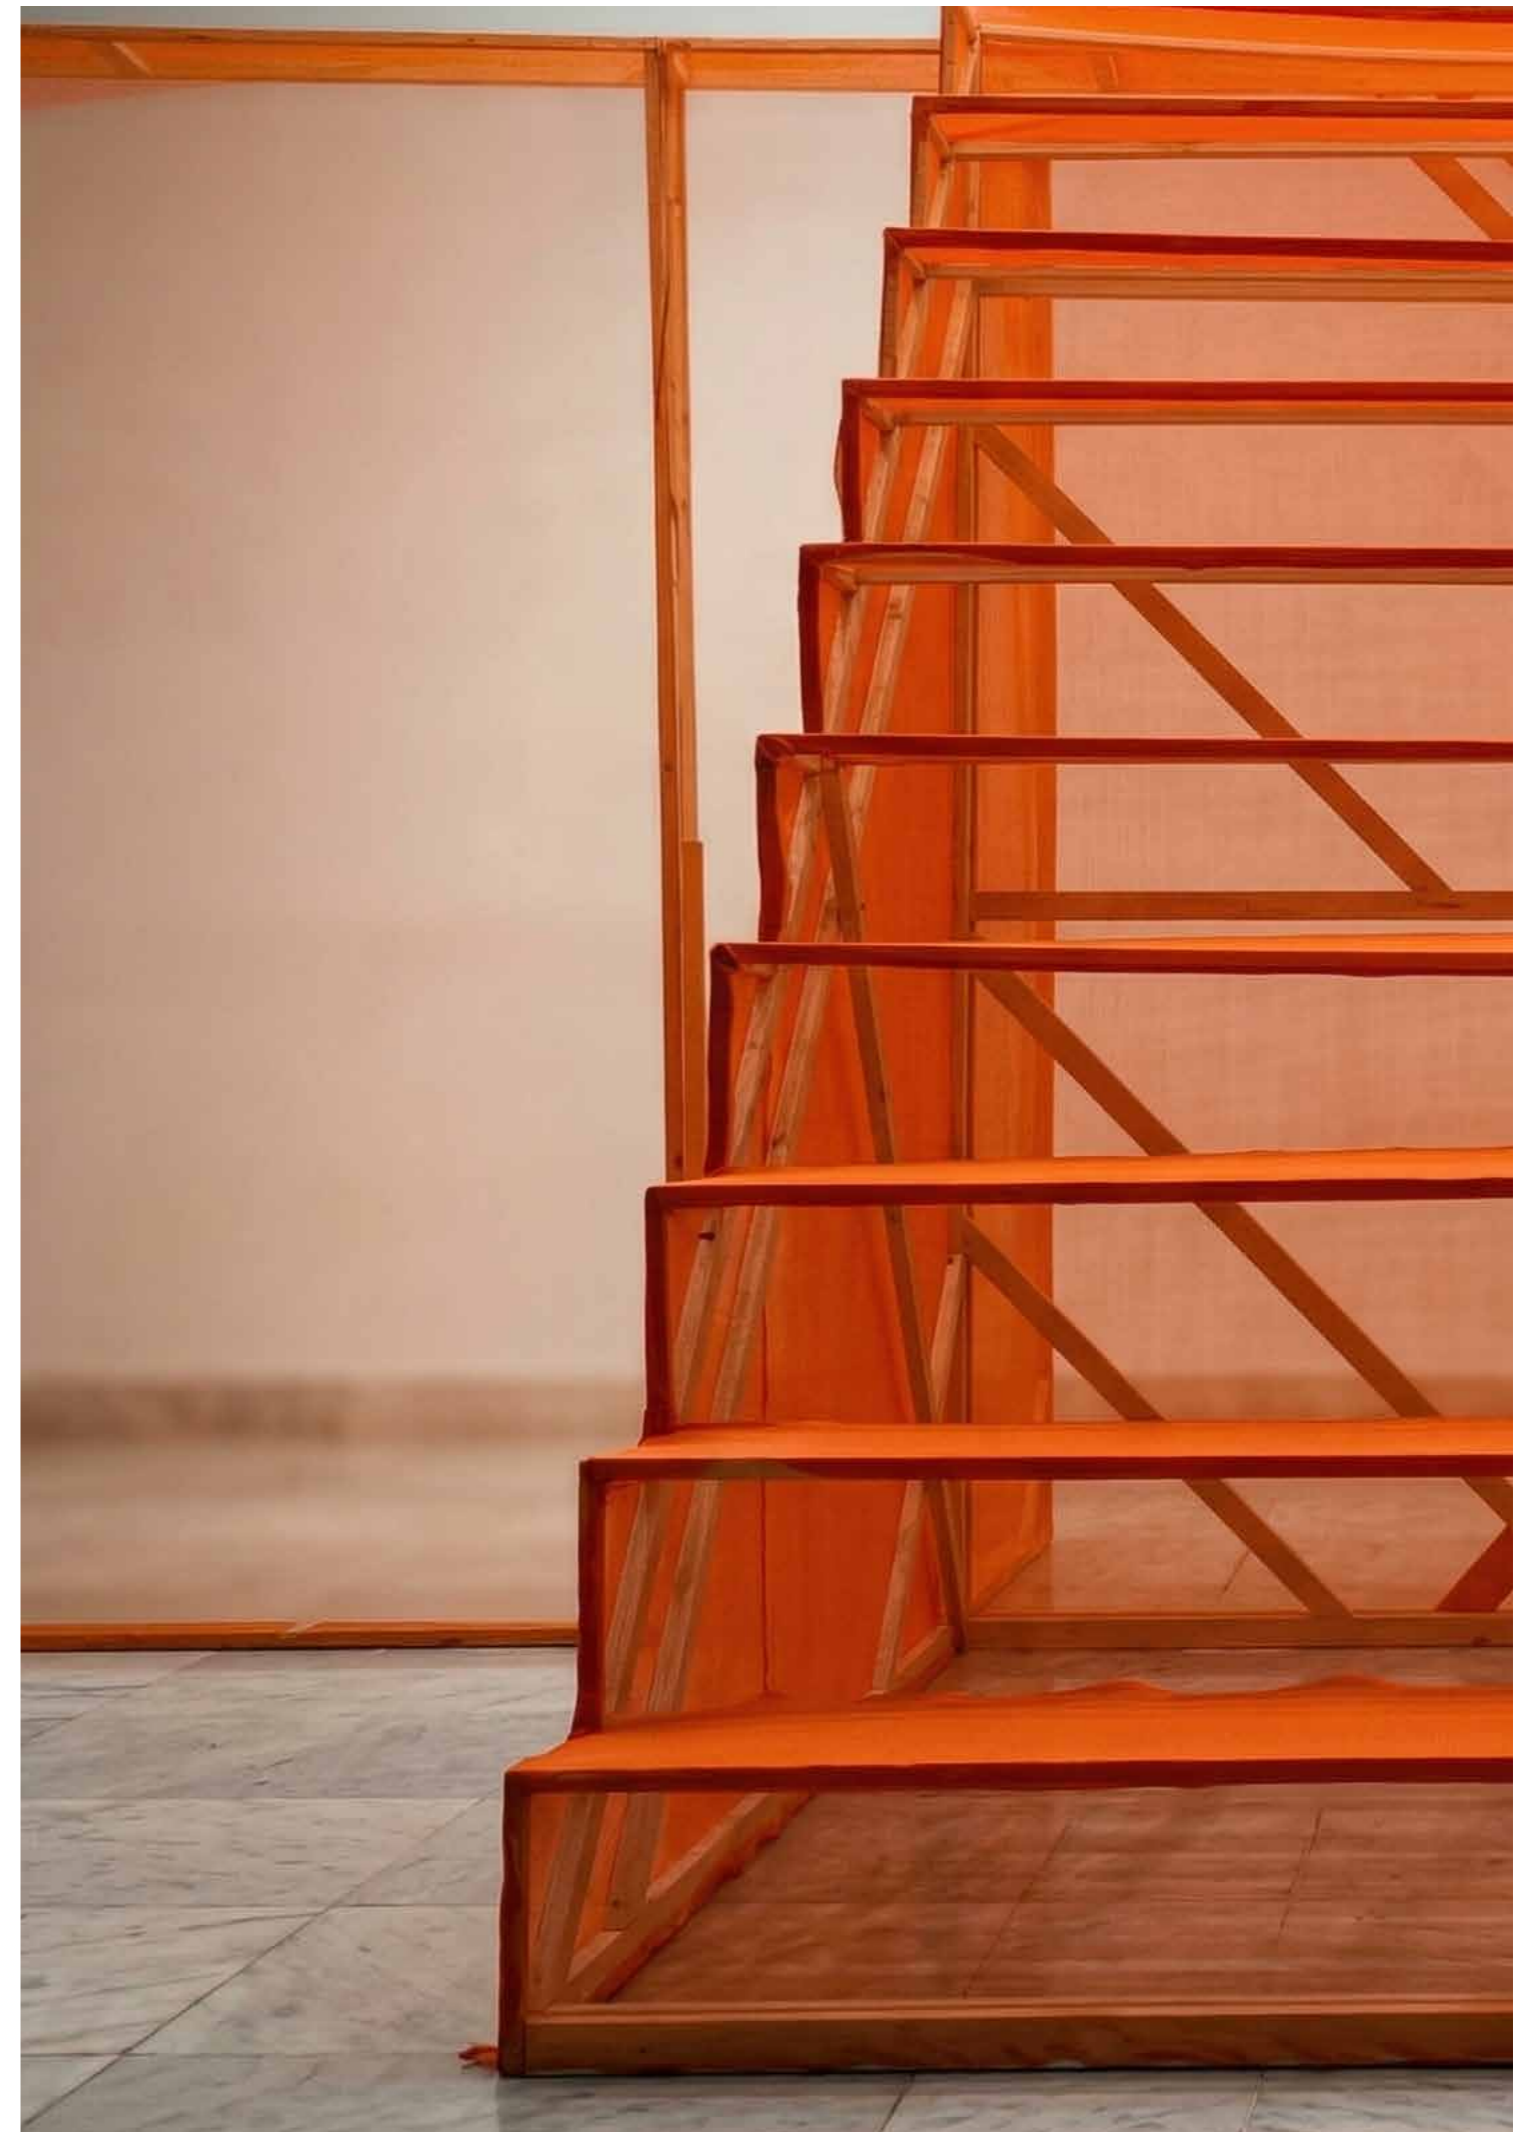

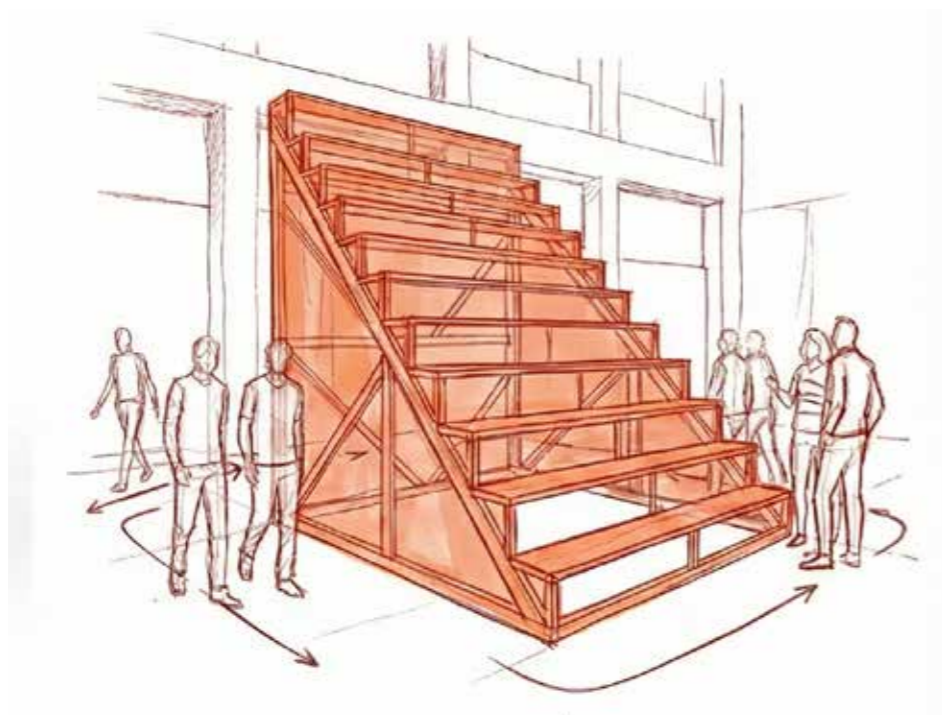

Purpose University Exhibition

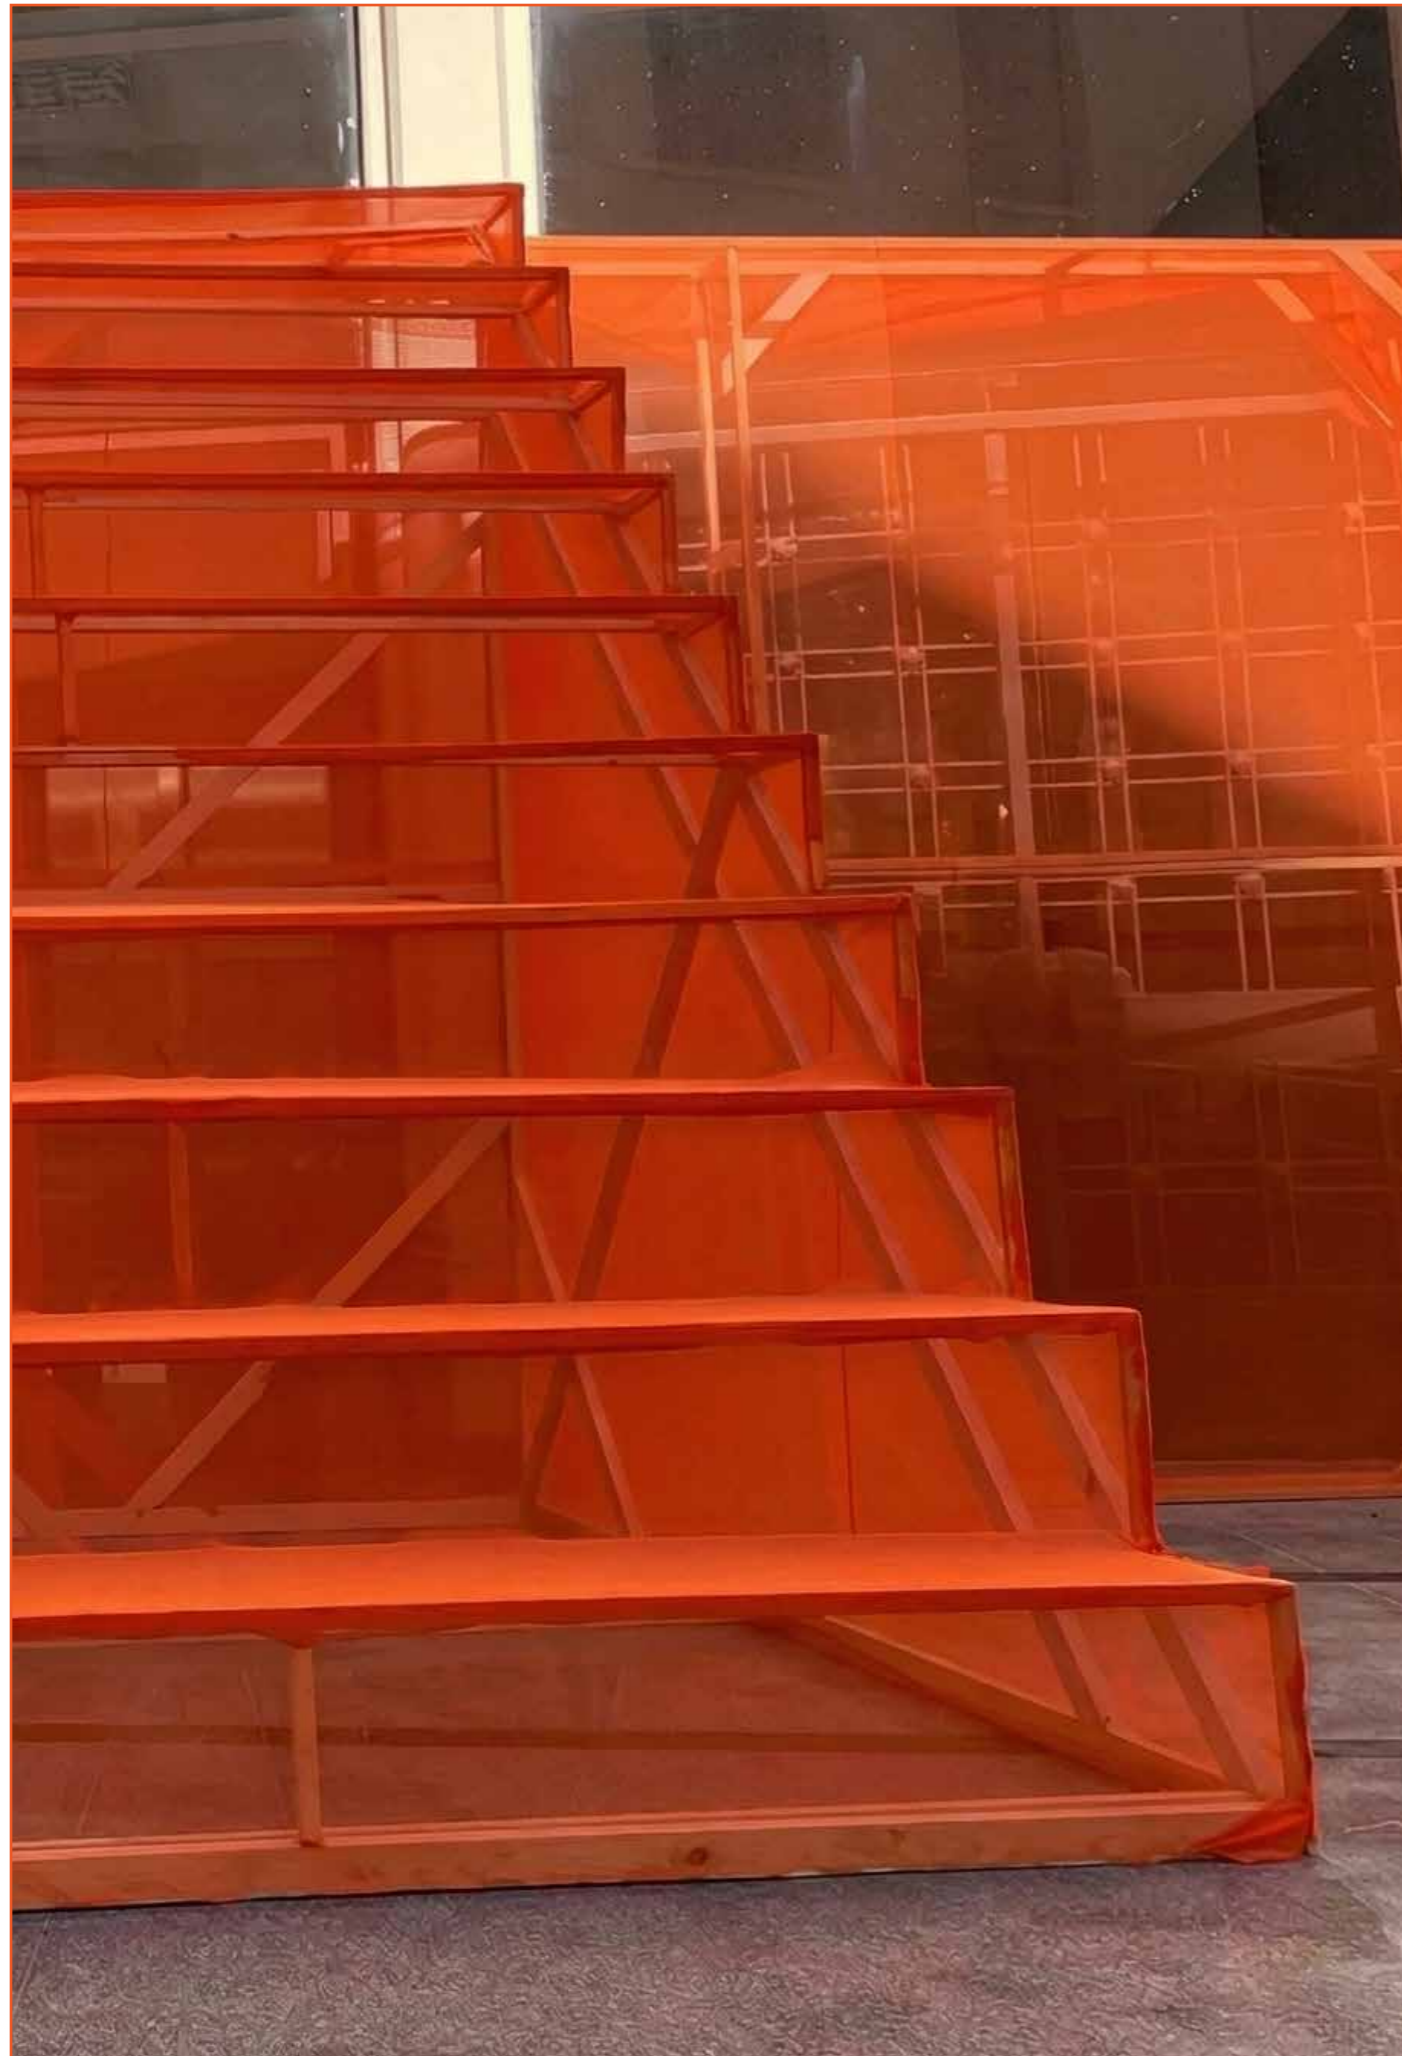

Location Cairo University, Main Building Entrance.

Status Installation, December 2022.

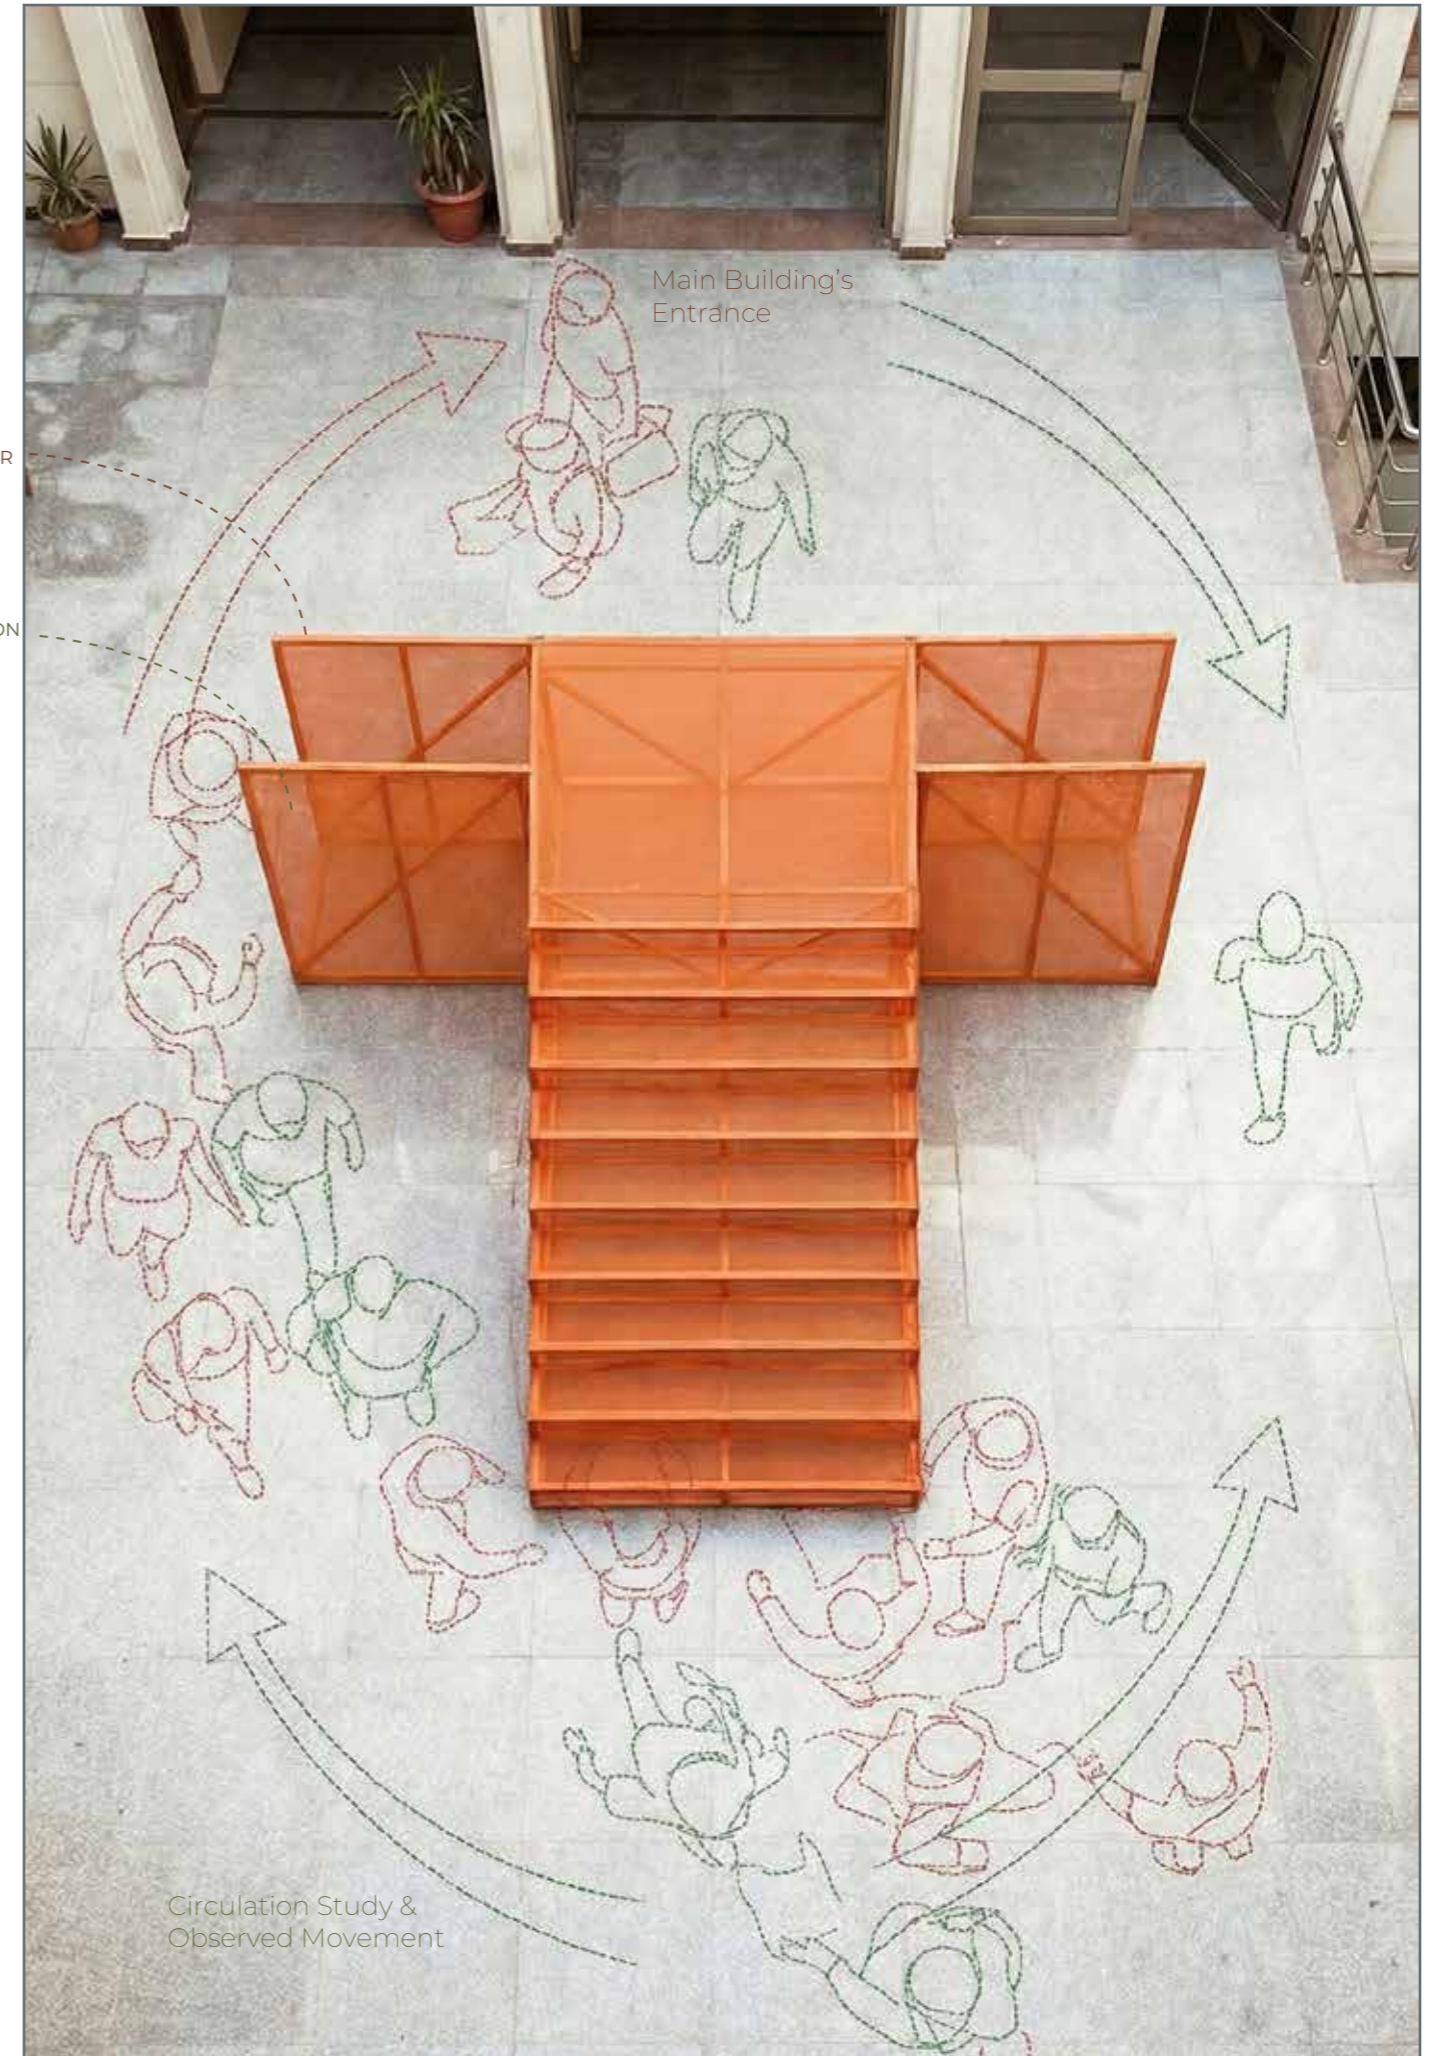

Concept A deconstructed stair at the entrance disrupts the expectation of linear progression.

- Movement is redirected rather than completed
- Transparency suggests accessibility while preventing it
- It confronts visitors at the point of entry
- The object shifts from function to spatial narrative

Final Product at the exhibition

Movement without arrival
