

| Tehran Heterochrony |

* In biology, heterochrony is defined as a developmental change in the timing of events, leading to changes in size and shape.

* The term heterochrony refers to changes, over evolutionary time, in the rate or timing of developmental events.

Tehran Heterochrony would be an installation representing my ideas about Tehran which is the city that I have lived in from (1987 till 2012), consisted of series of my drawings, photographs, Texts, collected objects and a video.

It could be divided to:

|1| Past | [Memories]

|2| Present |

In this part my main focus is representing today's Tehran's visual and architectural image in a critical way.

|3| Future | [Fiction]
