Many people in Shanghai spent **1-3 hours in the subway** going to work and going home every day, thus leading to a lack of sleep. These people may **take a nap** to have a rest in the subway. But the biggest concern is that they may **oversleep and miss the stop**.

This app aims to help those commuters who need to sleep in subway **prevent oversleeping**. With the map and location-based alarm, the APP can get the user's location, lines and destination so the user can sleep confidently before wake up in time.

Subway Sleeping

<http://www.sznews.com/news/content/images/site3/20070321/00903505.jpg>

<http://img1.gtimg.com/xian/pics/hv1/70/69/1898/123435115.jpg>

Many people in big cities of China live far from where they work. They may spent 1-3 hours in the subway going to work and going home every day, thus leading to a lack of sleep. Due to good public security and order, these people are willing to take a nap to have a rest in the subway. But the biggest concern is that they may oversleep and miss the stop.

main interfaces

This app aims to help those people who need to sleep in the subway prevent oversleeping.

With the offline subway route map and location-based alarm, the APP can get the user's location, lines and destination so the user can sleep confidently before the APP wake her/him up on certain specific station.
